VOLUME V (Pages 1-132)
TRANSCRIPT OF PROCEEDINGS
BEFORE THE HONORABLE CAROL DOYLE

APPEARANCES:

For the Plaintiff: Mr. Bret Harper;
Mr. Gus A. Paloian, Chapter 7
Trustee;

For the Defendant: Mr. Bradley Block;
Mr. Bruce de'Medici.

Court Reporter: MARY C. KELLY, CSR
United States Courthouse
219 South Dearborn Street
Room 661
Chicago, Illinois 60604

1 THE CLERK: Everyone please rise.

2 Grant Lustig, Gus Paloian as trustee
3 versus Scott Weiner.

4 THE COURT: I don't know if we need
5 appearances here. I suppose we should probably.

6 MR. PALOIAN: Your Honor, Gus Paloian,
7 case trustee, and Bret Harper, counsel.

8 MR. BLOCK: Brad Block on behalf of the
9 defendant.

10 MR. DE'MEDICI: Bruce de'Medici on
11 behalf of Scott Weiner.

12 THE COURT: And I wanted to say last
13 time, that argument, I think, was your closing
14 argument, but I converted it into an oral argument
15 with you people having no notice, and it went on
16 for about five hours.

17 But at the end, I thought I was too
18 harsh on Mr. Harper, so I'm sorry. At the end, I
19 was saying things like, okay, okay, what you got,
20 what you got, give me something new, all right? I
21 normally would never do that, but I was at the end
22 of my rope, and I'm sorry to do that.

23 MR. HARPER: No problem, your Honor.

24 THE COURT: All right. Have a seat.

25 I'm going to cut to the chase. I have a

1 40-page, single-spaced opinion to read, but Mr.
2 Weiner is prevailing on all three counts.

3 I think the fundamental issue is pretty
4 simple. I have to look at what was the value to
5 Mr. Lustig had he not transferred it, and that's
6 how you look at what was lost. And the value to
7 Mr. Lustig at the time of the transfer was
8 virtually zero.

9 And then I go through -- I go through
10 all the expert testimony and all of that, and I
11 process it all, and no matter how you evaluate the
12 issues, I get to the same result, which is there
13 was no fraudulent transfer here.

14 So I'm sorry to say I'm just going to
15 just read this into the record. It's kind of long
16 and complicated. I'm going to hope that the court
17 reporter will actually put in the headings that I
18 say. I don't know if that's possible. I never end
19 up reading these transcripts. But, you know, it
20 divides it up.

21 So it's very, very long. But I, again,
22 tried to put in some headings so that somebody
23 trying to read the long thing will have some idea
24 about organization.

25 So here we go.

1 These are my Findings of Fact and
2 Conclusions of Law.

3 Gus Paloian, the trustee in the Chapter
4 7 bankruptcy case of the debtor Grant Lustig, filed
5 this adversary proceeding against Scott Weiner to
6 recover an allegedly fraudulent transfer of an
7 interest in some restaurant entities. The
8 plaintiffs stipulated quite a few facts, and then I
9 held a trial on the remaining issue.

10 After weighing all the evidence and
11 considering the law on a number of issues, I will
12 enter judgment in favor of Mr. Weiner and against
13 the trustee on all counts. The trustee has failed
14 to meet his burden of proving that Lustig's
15 transfer of his interests in the four
16 restaurant-related entities was fraudulent.

17 Roman Numeral I, the first section of my
18 opinion, is called Jurisdiction. It's the
19 shortest.

20 This is a core bankruptcy proceeding
21 over which I have jurisdiction under 28 U.S.C.
22 Section 157(b)(2)(H). Both parties expressly
23 consented on the record at the beginning of the
24 trial to me entering a final judgment in this
25 adversary proceeding.

1 Heading Number II, Roman Numeral II of
2 my opinion, is entitled The Claims and General
3 Standards.

4 The trustee's complaint alleges three
5 counts. Count I alleges a constructive fraudulent
6 transfer. Count II alleges an actual fraudulent
7 transfer. Count III alleges unjust enrichment.

8 Subsection A. Count I.

9 Count 1 alleges that the transfer of the
10 restaurant interests from Lustig to Weiner was a
11 constructively fraudulent transfer under 740 ILCS
12 160/5(a)(2), which is the trustee has standing to
13 pursue under 11 U.S.C. Section 544(b)(1).

14 Section 544(b)(1) of the Bankruptcy Code
15 provides that: Except as provided in Paragraph 2,
16 the trustee may avoid any transfer of an interest
17 of the debtor in property or any obligation
18 incurred by the debtor that is voidable under
19 applicable law by a creditor holding an unsecured
20 claim that is allowable under Section 502 of this
21 title and it is not allowable only under Section
22 502(e) of this title.

23 Section 544(b)(1) is the derivative of
24 state law and authorizes a trustee to "step into
25 the shoes of an actual (unsecured) creditor who

1 could have avoided the transfer outside bankruptcy
2 using a state law cause of action." *In re*
3 *Equipment Acquisition Resources, Inc.*, 742 F.3d 743
4 (7th Circuit 2014).

5 In this case, the state law on which the
6 trustee relies is the Illinois version of the
7 Uniform Fraudulent Transfer Act, and, more
8 specifically, Count I is under 740 ILCS 160/5(a)(2)
9 and 160/8(a) for constructively fraudulent
10 transfers.

11 That provision states: A transfer made
12 or obligation incurred by a debtor is fraudulent as
13 to a creditor whether the creditor's claim arose
14 before or after the transfer was made or the
15 obligation was incurred if the debtor made the
16 transfer or incurred the obligation: And then skip
17 1. 2, without receiving a reasonably equivalent
18 value in exchange for the transfer or obligation,
19 and the debtor (A) was engaged or was about to
20 engage in a business or a transaction for which the
21 remaining assets of the debtor were unreasonably
22 small in relation to the business or transaction;
23 or (B) intended to incur or believed or reasonably
24 should have believed that he would incur debts
25 beyond his ability to pay as they became due.

1 That's the end of the quote from the statute.

2 "Fraud in law" -- which is what
3 constructive fraud is -- "exists when the debtor
4 conveys assets for inadequate consideration
5 rendering himself insolvent during a time when he
6 has existing or contemplated indebtedness." That's
7 from *Wachovia Securities, LLC v. Jahelka*,
8 J-A-H-E-L-K-A, 586 F.Supp.2d 972 at 1014 (Northern
9 District of Illinois 2008). I believe it's
10 bankruptcy. Maybe not. Unlike fraud in fact,
11 fraud in law, which is constructive fraud, does not
12 require proof of fraudulent intent. That's a
13 zillion cases, but I will cite *Society of Lloyd's*
14 *v. Collins*, 284 F.3d 727 at 730 (7th Circuit 2002).
15 I'll skip the next one. Rather, fraud in law is
16 presumed when a debtor makes a voluntary transfer
17 without consideration or for inadequate
18 consideration, and that consideration hinders or
19 delays the rights of his creditors. See *Collins*
20 284 F.3d at 730. *Cordes & Company, LLC v. Mitchell*
21 *Companies, LLC*, 605 F.Supp.2d 1015, 1020 to 21.
22 That's the Northern District of Illinois 2009.

23 Here, the parties agree that there was a
24 transfer from the debtor, Mr. Lustig, and to Mr.
25 Weiner, the defendant, and Mr. Lustig was insolvent

1 when the transfer was made. The only disputed
2 issues regarding whether -- issues is whether the
3 transfer was -- regarding whether the transfer was
4 constructively fraudulent is whether Lustig got
5 reasonably equivalent value for the transfer.

6 So Subparagraph 1 of my standards for
7 Count I is entitled Reasonably Equivalent Value.

8 The factors utilized to determine
9 reasonably equivalent value are: (1) whether the
10 value of what was transferred is equal to the value
11 of what was received; (2) the market value of what
12 was transferred and received; (3) whether the
13 transaction took place at an arm's length; and (4)
14 the good faith of the transferee. Lots of cases I
15 can cite for this, but some are: *Zeddun*,
16 Z-E-D-D-U-N, v. *Griswold*, G-R-I-S-W-O-L-D, in the
17 *In re Wierzbicki* case, W-I-E-R-Z-B-I-C-K-I, just
18 issued a week or two ago by the Seventh Circuit,
19 Number 16-1334 slip opinion at 5 (7th Circuit July
20 27, 2016); *In re Smith*, 811 F.3d 228 at 240, (7th
21 Circuit 2016); *Barber v. Golden Seed Company, Inc.*,
22 129 F.3d 382 at 387 (7th Circuit 1997); *Grigsby v*
23 *Carmell in the In re Apex Auto Warehouse, L.P.*, 238
24 B.R. 758, 773 (Bankruptcy Northern District of
25 Illinois 1999). There is no fixed formula for

1 determining reasonable equivalence, but it will
2 depend on all the facts of each case. That's from
3 the *Barber* case in the Seventh Circuit, 129 F.3d at
4 387, and common bankruptcy law.

5 Whether a debtor has received reasonably
6 equivalent value in an exchange of property is a
7 question of fact. And for that, I'll quote the
8 *Zeddun* case of the Seventh Circuit again. There
9 are thousands of cases saying that.

10 Valuing property and forbearance from
11 litigation "is not an exact science," and a court
12 must consider the "totality of the circumstances."
13 That's also from *Zeddun* slip opinion at 8. "The
14 exchange need not involve exact equality in value.
15 It is enough for there to be 'rough' proximity.
16 Citations omitted. Instead of a precise
17 mathematical formula, courts look to the
18 circumstances of the particular case to determine
19 whether the value of what the debtor received falls
20 within a reasonable range of equivalence." That's
21 from *White v. Coyne* in the *In re Pawlak* bankruptcy
22 case, 483 B.R. 169 at 183 to 84 (Bankruptcy Western
23 District of Wisconsin 2012).

24 The burden of proving lack of reasonably
25 equivalent value is on the trustee. *In re 4100*

1 *West Grand, LLC*, 481 B.R. 444 at 455 (Bankruptcy
2 Northern District of Illinois 2012) citing other
3 cases.

4 "In determining reasonably equivalent
5 value, the focus is on what the debtor, in italics,
6 surrendered and what the debtor, in italics again,
7 received, not what any third party or creditor
8 might have gained or lost as a result of the
9 transfer." That's from *White v. Coyne* in the *In re*
10 *Pawlak* case, 483 B.R. at 183 to 84. The
11 transaction should be viewed from the point of view
12 of unsecured creditors, what they would have had
13 had the transaction not occurred versus what they
14 had as a result of the transfer. See e.g.,
15 *Official Committee of Unsecured Creditors v. The*
16 *Fountainhead Group, et al.*, in the *In re Bidgeview*
17 case. And I was trying to figure out if there was
18 a published cite, and let me just take a look.
19 Aha. I have a B.R. site for that one. That's good
20 because I rely on that a lot. 538 B.R. 477. It's
21 also 2015 Bankruptcy LEXIS at 3350. It's
22 Bankruptcy Northern District of Illinois 2015,
23 Judge Hollis in this district, and it's an
24 excellent opinion. Okay. So see that case. Only
25 those transfers that diminished the debtor's

1 prepetition assets should be avoided. *Jordan v.*
2 *Kronenberger*, K-R-O-N-E-N-B-E-R-G-E-R, in the *In re*
3 *Jordan* case, 392 B.R. 428 at 441 (Bankruptcy
4 Northern District of Idaho 2008). "The proper
5 focus is on the net effect of the transfers on the
6 debtor's estate, the funds available to unsecured
7 creditors. As long as the unsecured creditors are
8 no worse off, no fraudulent" -- and I'm leaving out
9 a lot -- "... no fraudulent transfer has occurred."
10 *Harman v. First American Bank of Maryland, In re*
11 *Jeffrey Bigelow Design Group, Inc.*, bankruptcy, 956
12 F.2d. 479 at 484 (4th Circuit 1992).

13 "Indirect benefits can constitute
14 reasonably equivalent value." *In re Image*
15 *Worldwide, Ltd.*, 139 F.3d 574 at 579 (7th Circuit
16 1998).

17 A promise which gives rise to an
18 enforceable contract right constitutes an economic
19 benefit for purposes of reasonable value. *Pawlak*,
20 483 B.R. at 185.

21 So that's Count I Section A, my Roman
22 Numeral II section on standards.

23 Section B of the standards part is Count
24 II, Actual Fraudulent Transfer.

25 In Count II, the trustee seeks recovery

1 based on the same transfer of the restaurant
2 interests, but based on actual fraud in the
3 transfer pursuant to 740 ILCS 160/5(a)(1) and
4 160/8(a). That statutes provides:

5 A transfer made or obligation incurred
6 by a debtor is fraudulent as to a creditor whether
7 the creditor's claim arose before or after the
8 transfer was made or the obligation was incurred if
9 the debtor made the transfer or incurred the
10 obligation (1) with actual intent to hinder, delay
11 or defraud any creditor of the debtor.

12 Fraud, in fact, is when the debtor has a
13 specific intent to hinder his creditors. *Cordes &*
14 *Company v. Mitchell Companies, LLC*, 605 F.Supp.2d
15 1015 at 1020 (Northern District of Illinois 2009).

16 In determining whether a transfer is
17 made with actual intent to defraud, the UFTA sets
18 forth several factors, also known as the badges of
19 fraud, from which an inference of fraudulent intent
20 may be drawn. Section 5(b) of the UFTA, which
21 Illinois follows, sets forth the following indicia:

22 1, the transfer or obligation was to an
23 insider;

24 2, the debtor retained possession or
25 control of the property transferred after the

1 transfer;

2 3, the transfer or obligation was
3 disclosed or concealed;

4 4, before the transfer was made or
5 obligation was incurred, the debtor had been sued
6 or threatened with suit;

7 5, the transfer was of substantially all
8 the debtors assets;

9 6, the debtor absconded;

10 7, the debtor removed or concealed
11 assets;

12 8, the value of the consideration
13 received by the debtor was reasonably equivalent to
14 the value of the asset transferred or the amount of
15 the obligation incurred;

16 9, the debtor was insolvent or became
17 insolvent shortly after the transfer was made or
18 the obligation was incurred;

19 10, the transfer occurred shortly before
20 or shortly after a substantial debt was incurred;

21 And, 11, the debtor transferred the
22 essential assets of the business to a lienor who
23 transferred the assets to an insider of the debtor.

24 That's all from 740 ILCS 160/5(b).

25 "When these 'badges of fraud' are

1 present in sufficient number, they may give rise to
2 an inference or presumption of fraud." *Steel*
3 *Company v. Morgan Marshall Industries, Inc.*, 278
4 Ill.App.3d 241 at 251, 662 N.E.2d 595 at 602 (1st
5 District Illinois Appellate 1996).

6 Okay. So Subsection C, capital C, of my
7 Claims and General Standards Section, is entitled
8 Remedies For Both Fraudulent Transfer -- for Both
9 Fraudulent Transfer Claims.

10 Under the claims in both Count I and II,
11 if a fraudulent transfer is proven, the remedy
12 available is provided in Section 8(a), which allows
13 the court to avoid the transfer, attach the asset
14 and apply equitable principles, and do a number of
15 other things in its discretion. Section 550 of the
16 Bankruptcy Code, which is 11 U.S.C. Section 550,
17 also applies to transfers that a trustee avoids
18 under Section 544, which is what we're going under
19 here. It provides that the court may order that
20 the property or other value of the property -- I'm
21 sorry -- the property or the value of the property
22 must be brought into the estate. It also provides
23 for how a trustee can recover from subsequent
24 transferees who received the property from the
25 initial transferee. As I'll discuss later, this

1 provision is relevant to a portion of the trustee's
2 claim.

3 Section 8(a) of the Illinois Uniform
4 Fraudulent Transfer Act provides as follows:

5 In an action for relief against a
6 transfer or obligation under this Act, a creditor,
7 subject to the limitations of Section 9, may
8 obtain:

9 1, the avoidance of the transfer or
10 obligation to the extent necessary to satisfy the
11 creditors claim;

12 2, an attachment or other provisional
13 remedy against the asset transferred or other
14 property of the transferee in accordance with the
15 procedure described in the Code of Civil Procedure;

16 3, subject to applicable principles of
17 equity and in accordance with applicable Rules of
18 Civil Procedure (A) an injunction against further
19 disposition by the debtor or transferee or both of
20 the asset transferred or of other property; (B)
21 appointment of a receiver...; and (C) any other
22 relief that circumstances may require.

23 Subsection D of my Roman Numeral II
24 section on standards. Subsection D is entitled
25 Count III, Unjust Enrichment.

1 In Count III, the trustee purports to
2 allege a claim for unjust enrichment. His counsel
3 said nothing about it in his opening statement and
4 he made no attempt to -- I really meant in his
5 closing argument, and I don't believe in his
6 opening statement he did either. And he made no
7 attempt to demonstrate how he could recover under
8 this count in his closing argument. I therefore
9 determined at trial that the trustee had failed to
10 prove and waived this claim. I'll enter judgment
11 in favor of the defendant on Count III.

12 All right. Section Roman Numeral III of
13 my opinion is entitled Facts.

14 I find the following facts based on the
15 evidence presented at trial, the stipulations of
16 the parties and the admissions of the parties. I'm
17 about to make many factual findings in this section
18 of my opinion, but I will also continue to make
19 findings of fact throughout the later sections of
20 my opinion as well. Also, I will make additional
21 credibility findings where I think appropriate
22 through my findings, but I will begin with my
23 general findings regarding the two principal fact
24 witnesses, Mr. Weiner and Mr. Lustig.

25 I found Mr. Weiner to be highly

1 credible. He was a straight-shooting and honest
2 businessman who answered questions directly and
3 truthfully. Weiner was not in any way in cahoots
4 with Mr. Lustig.

5 Mr. Lustig, on the other hand, was not a
6 credible witness. He lied to Mr. Weiner and his
7 co-manager and owner Mr. Mohr on a number of
8 occasions. He lied to the City of Chicago on
9 liquor license applications, and he lied to this
10 court. He was not credible.

11 The story begins with Grant Lustig, who
12 is the debtor in the bankruptcy case in which this
13 adversary proceeding arises.

14 Mr. Lustig used money that he
15 transferred from an account of an entity that he
16 controlled with his father, but still he
17 controlled, called Lustig Capital, and another
18 company he controlled, Workforce Financial, to buy
19 an interest placed in his name personally in four
20 related restaurant entities that were formed to
21 operate two restaurants, the Bleeding Heart Bakery
22 and Roots. Both are in what is now a trendy
23 neighborhood, Wicker Park, in Chicago. For each
24 enterprise, two separate entities were created to
25 own the real estate and to operate the restaurants.

1 Roots, the pizza and craft beer business, is owned
2 and operated by Roots Handmade Pizza, LLC, while
3 the real estate in which Roots is located is owned
4 by Chicago Division Street Restaurants, LLC, or
5 CDSR. For the Bleeding Heart Bakery, the bakery
6 and restaurant is owned by BHB & Cafe Management
7 Company, LLC, or BHB Cafe for short. The real
8 estate in which Bleeding Heart is located is owned
9 by -- did I say that right? I hope so. The real
10 estate in which the Bleeding Heart Bakery is
11 located is owned by BHB Real Estate, LLC, or BHB
12 Cafe for short. Because of the many serious
13 problems in the operation of Bleeding Heart Bakery,
14 the enterprise now operated by BHB Cafe is now
15 called the Westown Bakery, I believe, or something
16 like that. So it's no longer called Bleeding
17 Heart.

18 As Weiner credibly testified, Lustig had
19 been a frequent customer of a different restaurant
20 that was owned, at least in part, and managed by
21 Weiner and his business partner Greg Mohr, spelled
22 M-O-H-R. Mohr and Weiner had met -- they had met
23 each other while working at yet another restaurant,
24 Joe's Seafood or something or another, a Lettuce
25 Entertain You restaurant. They decided to open

1 their own restaurant together, 50/50 Restaurant, at
2 which Mr. Lustig became a frequent customer. 50/50
3 was the first restaurant that these two, Weiner and
4 Mohr, opened on their own and together, though both
5 had worked for other successful restaurants before.

6 Weiner and Mohr decided to try to open
7 two more restaurants, the ones at issue in this
8 case. Weiner began work on business plans for both
9 Roots restaurant and Bleeding Heart Bakery Cafe in
10 January and February of 2010. The two restaurants
11 would be next to each other in the 1900 West block
12 of Chicago Avenue in Chicago's Wicker Park
13 neighborhood.

14 As explained in the Roots business plan
15 given to all potential investors, which is
16 Plaintiff's Exhibit 10, the Roots restaurant was to
17 feature hand-crafted pizza based on the style of
18 pizzas Mohr had known from the Quad Cities where he
19 grew up. They would be made in an open kitchen
20 producing high-quality hand-thrown pizzas, an
21 extensive salad list, and gourmet sausages in a
22 comfortable and casual atmosphere. The idea was to
23 be family friendly and offer this new kind of pizza
24 in the Chicago market where people could also drink
25 alcoholic beverages. This was the beginning of the

1 craft beer boom that has now gone crazy, and they
2 wanted to be the first place to have a large local
3 and Midwestern craft beer selection. As shown in
4 the Roots business plan, again, Plaintiff's
5 Exhibit 10, sales of alcohol constituted 48 percent
6 of the sales projections for Roots. The sale of
7 alcohol was essential to the success of this
8 business. The restaurant was built out to have a
9 huge bar that seats 65 people. If they didn't sell
10 alcohol in the restaurant, there was nothing to
11 distinguish themselves from take-out pizza places
12 in the area. If the restaurant could not sell
13 alcohol, it would be catastrophic. It would fail
14 quickly.

15 The second restaurant was to be called
16 the Bleeding Heart Bakery and Cafe. It would have
17 a large space featuring organic pastries, cupcakes,
18 brownies, vegan foods, et cetera. As described in
19 the business plan, which is also in Plaintiff's
20 Exhibit 10, the bakery has 6500 square feet of
21 space. Immediately inside is a host stand. To the
22 right is a retail counter selling all kinds of
23 fresh baked goods. To the left is seating for 185
24 guests for breakfast and lunch. There is also a
25 studio cake room, whatever that may be. Behind and

1 through the glass you can see the bakery
2 production. Then through a stairwell, you walk
3 into a private room with a fully stocked bar, and
4 then you can go outside to a rooftop deck that
5 seats 85 people where they can have private events,
6 showers, dinners, et cetera. The bakery would also
7 sell alcohol, which was important to brunch sales
8 and the private parties for all the special spaces,
9 but alcohol was less important to the success of
10 the bakery than it was to Roots where it was
11 absolutely critical to the success of the
12 restaurant. The bakery would not be able to
13 attract a brunch crowd or private parties for
14 showers and other events without liquor sales. So
15 it was a significant part of the overall business
16 plan. Weiner credibly testified that if they had
17 planned not to sell alcohol at the bakery, the
18 concept would have been completely different. They
19 would have just made it a big wholesale bakery.
20 But the business plan called for alcohol sales in
21 there for the retail spaces that I've just
22 described.

23 The Roots business plan called for the
24 real estate to be purchased for around 1.1 million.
25 It's stated that 1.7 million in financing would be

1 required to open the restaurant with 700,000 in
2 construction loan coming from the SBA, meaning the
3 Small Business Administration, or another lender,
4 and approximately 1 million coming from limited
5 partners. The business plan of the bakery called
6 for the purchase of real estate that would cost
7 from 1 to 1.2 million. The bakery business plan
8 also called for approximately 1.7 million required
9 to open with about 1.7 million coming from the
10 limited partners and \$700,000 construction loan for
11 the build out of the property.

12 So the cost of -- estimated cost to
13 start up Roots was approximately 2.519 million, and
14 the total estimated cost of starting up the
15 Bleeding Heart was about 2.51 million, so pretty
16 close. The estimated total loans for the project
17 was about 3.2 million with around 2 million in
18 additional funding coming from these individual
19 investors.

20 After Weiner completed the business
21 plans, they had subscription and operating
22 agreements drawn up that were consistent with the
23 business plans. Weiner and Mohr then began looking
24 for and meeting with potential investors. Lustig
25 grew up in the same town as Weiner, though they did

1 not know each other growing up. Lustig was a
2 friend of Weiner's sister, and Weiner and Lustig
3 met at some point after Lustig became a big spender
4 at 50/50, probably using other people's money, I
5 might add.

6 Lustig expressed an interest in
7 investing in the businesses. Weiner then met with
8 Lustig at the 50/50 Restaurant to discuss the
9 possibility of Lustig investing. Miles Lustig,
10 Grant's father, was also at the first meeting.
11 They had several face-to-face meetings about the
12 investment, including at least one that Mohr
13 attended. As they did with all potential
14 investors, Weiner gave Lustig the business plan,
15 subscription agreements and operating agreements.
16 They discussed price rates for purchasing more
17 shares and a lot of the details of the investment
18 and then attempted to figure out if Lustig was
19 interested. He was interested, so then they
20 continued on to the next phase of the discussions
21 and discussed the investment in more detail.

22 Weiner discussed with each investor,
23 including Lustig, that they would need a liquor
24 license for both restaurants, and that no matter
25 what the level of investment, an investor would

1 have to disclose information about themselves to
2 the City of Chicago for the liquor license. I
3 should say liquor license application. For the
4 smallest investors, they would require only giving
5 name, address, Social Security Number, et cetera.
6 But for investors of 5 percent or more, which would
7 include Lustig, Weiner specifically told them
8 before they invested they would have to be on the
9 liquor licenses for each restaurant, and they could
10 not have any criminal convictions. Weiner
11 explained this to each potential investor up front
12 because many people are hesitant to have any
13 association with liquor licenses. He also
14 explained that a guarantor or 5 percent investor
15 would be fingerprinted and would have to disclose
16 any criminal history.

17 So Lustig said he was originally
18 considering investing around \$250,000, but he
19 decided to increase it to 375 -- although I think I
20 made a typo. I think it's 370 -- and to become a
21 guarantor on the loans so that he could get an
22 extra 1 percent interest just by being the
23 guarantor. Before Lustig agreed to invest, Weiner
24 specifically told Lustig he would have to be part
25 of the application for the liquor license to the

1 City, and he would have to submit to a criminal
2 background check. He specifically asked Lustig if
3 he had any felony convictions, and Lustig said, no,
4 that would be no problem.

5 Lustig testified at trial, conveniently,
6 that he did not recall having this conversation
7 with Weiner about having to submit to a background
8 check and not having felony convictions. I did not
9 believe Lustig on this. Instead, I found far more
10 credible Mr. Weiner's testimony that he told Lustig
11 before he invested he would have to have a criminal
12 background check and could not have any felony
13 convictions, and Lustig lied about it probably
14 because he didn't want to admit he had criminal
15 convictions. Weiner had already opened one
16 restaurant, the 50/50, so he was fully familiar
17 with the details of starting an operation requiring
18 a liquor license. He had every reason to make sure
19 this was not a problem up front before investors
20 get involved. If Lustig had admitted his criminal
21 history before he invested, Weiner would have
22 turned him down right then and not accepted his
23 subscription, but Lustig lied.

24 He then signed the agreement, the
25 subscription agreement, gave Weiner a check for

1 \$120,000 that was drawn on the account of Lustig
2 Capital, a company Grant owned with his father
3 Miles Lustig. The check was dated May 17, 2010.
4 Weiner remembers asking Lustig about why the check
5 was from Lustig Capital, and Lustig just told him
6 it was one of his companies. Lustig sent another
7 check for \$125,000 from Workforce Financial that
8 showed up in the corporate accounting records in
9 Defendant's Exhibit 8. There is a third check that
10 isn't in the record, but it also came from
11 Workforce Financial, a company that Grant Lustig
12 managed and partially owned with investments from a
13 bunch of other creditors that are the plaintiffs in
14 another adversary proceeding against Lustig that
15 was called Shepard, et al., versus Lustig. Lustig
16 invested a total of \$370,000 in the four entities
17 involved in this case using those three checks from
18 Lustig Capital and Workforce Financial. As the
19 subscription agreements show and the operating
20 agreements as well, the membership interests were
21 owned by Grant Lustig individually, not by Lustig
22 Capital or Workforce Financial or any other
23 Lustig-related entity, and the parties have
24 essentially stipulated to that.

25 After Weiner and Mohr got enough

1 subscriptions from investors like Lustig, the
2 operating agreements were executed on October 12,
3 2010. Those agreements are in Plaintiff's
4 Exhibit 12. After that, Weiner and Mohr proceeded
5 to carry out their plans, buying the real estate,
6 getting loans from the SBA and the Gold Coast Bank.
7 They paid 1.4 million for the Roots building and
8 \$800,000 for the bakery building for a total of
9 \$2.2 million. They used 800,000 of investor money
10 for the down payment and got a loan from Gold Coast
11 Bank for the \$1.4 million balance. The bank got
12 guarantees from Weiner, Mohr, Mohr's parents, Grant
13 Lustig, the two Garcias who were to operate the
14 bakery, and two other people. All the guarantees
15 were for equal liability, except one guarantor had
16 to put up 500,000 into a collateral account that
17 actually shows up in the entities' books.

18 As Weiner and Mohr moved forward and
19 invested more and more money and obtained more
20 loans, Lustig still said nothing about his
21 convictions. If Weiner had known about the
22 criminal convictions before they closed on the real
23 estate, he would have delayed the closing and
24 forced Lustig to withdraw and try to find other
25 investors before proceeding. Instead, they forged

1 ahead, bought the properties, incurred the debt,
2 and then finalized architectural plans and hired a
3 lawyer to help get the liquor license in November
4 of 2010. They got building permits in early
5 January 2011 and began heavy building construction
6 for the build out right after that.

7 In January of 2010, Weiner sent an
8 e-mail to update investors, including Grant Lustig,
9 and remind them they would have to provide
10 background information for the liquor license.
11 Lustig still disclosed nothing. Weiner testified
12 that if he had known even at that point that Lustig
13 had a criminal conviction, he would have halted the
14 project and tried to replace Lustig as an investor.
15 Instead, they forged ahead. They applied for their
16 first liquor license February 2, 2011. They needed
17 four licenses for -- and I have the bakery, but I'm
18 not sure if that's right -- but they had to have
19 multiple licenses for each location because of the
20 way the City does things. They applied for both
21 Roots and bakery licenses around the same time.

22 At sometime between February and April
23 of 2011, Lustig and any other investor with at
24 least a 5 percent investment had to fill out a form
25 for the liquor license, which is in Defendant's

1 Exhibit 2. It's called an individual history form
2 or an IHF. It requires the person submitting it to
3 disclose personal information like address, Social
4 Security Number, driver's license number, employer,
5 et cetera, and had a special section entitled
6 "criminal history." That section that was
7 prominently marked halfway down the one-page form
8 asked "have you ever been convicted of a criminal
9 offense," and then it had check boxes for yes or
10 no. If the answer was yes, you were required to
11 list the crime in two spaces provided for Crime
12 Number 1 and Crime Number 2. Just above the
13 signature line at the bottom of the one-page form
14 is an acknowledgment in which the signer certifies
15 that all the information is true and complete and
16 authorizes the City to investigate to verify the
17 accuracy of the statements.

18 The form also states that making a false
19 statement may violate a whole bunch of laws and
20 that, quote, persons who submit false information
21 are subject to the denial of the requested City
22 action, close quote, and here we mean denial of the
23 liquor license.

24 Lustig filled out one of these forms
25 stating that he had no convictions, and he signed

1 it despite the warning that lying would result in
2 denial of the liquor license. Lustig did this
3 intentionally, knowing full well that he had a
4 criminal conviction and that they had not been
5 expunged, probably because he didn't want to admit
6 he'd been lying all along about the conviction.

7 Then in early April, Weiner informed all
8 the guarantors that they had to get fingerprinted
9 for background checks. Lustig showed up and was
10 fingerprinted on April 14, 2011. By that time, a
11 lot of construction had been done, especially on
12 the Roots property, and a lot of money drawn down
13 on the loans. Lustig still didn't tell anybody
14 about the convictions.

15 In the meantime, construction and
16 preparation for opening wasn't going as planned.
17 The cost of the projects was much higher than had
18 been planned. Instead of having the planned
19 3.2 million in loans, by May 31st they had
20 5.9 million in loans from both the SBA and Gold
21 Coast Bank as shown in the consolidated balance
22 sheet prepared as of May 31, 2011, Plaintiff's
23 Exhibit 13.

24 Work was also significantly behind
25 schedule. By the last week of May, Roots was

1 finally ready to open, a couple months later than
2 planned, to friends and family around Memorial Day
3 and to the public around June 3, 2011. The bakery
4 property at this time still needed a huge amount of
5 work. It still had dirt floors and might not have
6 had a roof on May 26th and couldn't possibly open
7 for several months.

8 On May 26, 2011, right before Roots was
9 scheduled to open for family and friends and the
10 week before it was to open for the public when
11 construction of the Roots property was completed
12 and all the supplies and food were bought, staff
13 was hired and trained, Weiner learned that the City
14 of Chicago was denying the liquor licenses for
15 Roots.

16 Weiner and the lawyer they hired to get
17 the license met with the liquor commissioner who
18 told them that the reason for the denial was that
19 Lustig had criminal -- a criminal conviction,
20 actually multiple, and he had lied about it on the
21 application.

22 As Gregory Steadman stated in a letter
23 in Defendant's Exhibit 3, the license application
24 was originally denied because Lustig had a
25 disqualifying conviction and because he lied on the

1 application. Weiner thought based on his
2 conversation with the liquor commissioner, that it
3 might have been possible to have gotten the license
4 anyway depending on the nature of the convictions
5 if Lustig had not lied, but he did lie, and they
6 refused to issue any license while he was an
7 investor at any level in any of the four entities,
8 not just as a guarantor, and not just for the
9 operating company, which here was Roots.

10 So Lustig could not be an investor in
11 any of the four entities for them to have a liquor
12 license -- any liquor licenses. This was a
13 catastrophe for everyone involved in the project.
14 Without the liquor license, there was no point in
15 opening the Roots restaurant that would depend on
16 half of its sales from liquor and other alcohol,
17 especially beer. So the denial of the liquor
18 license would have been the end of the road before
19 they even opened one of the two restaurants.

20 Weiner persuaded the liquor commissioner
21 in a meeting on May 26, 2011, to issue the liquor
22 licenses on the promise that Weiner would provide
23 an affidavit from Lustig within 24 hours stating
24 that Lustig would immediately get out of the
25 business, and that he would be, in fact, formally

1 removed from all ownership and lending
2 relationships with all four of the related entities
3 within 30 days.

4 Right after that meeting, Weiner called
5 Lustig and said they had to meet right away.
6 Either during the conversation or at the meeting
7 later that day or both, Weiner told Lustig that his
8 lie had been found out. That's not a direct quote.
9 That's the gist. That the licenses for both
10 restaurants would be denied if he was an investor
11 in any of the four entities, and that he should
12 give up his shares.

13 Weiner told Lustig that if Lustig did
14 not turn over the investments, Weiner and everyone
15 else involved in the projects would sue him for
16 causing the failure of the businesses. Both of
17 them knew that the businesses would fail and all
18 investments would be lost if Lustig remained an
19 owner of the interests. Weiner also told Lustig
20 that the loans wouldn't be paid off from the assets
21 of the company, that Lustig would not only lose his
22 entire investment, he would also be liable as a
23 guarantor on the bank loans and the SBA loans. In
24 fact, the Gold Coast loan allowed it to declare a
25 default on the loan as soon as any necessary

1 licenses were denied.

2 Lustig told Weiner during this
3 conversation that it was all a mistake. It was not
4 clear whether Lustig was saying this because Lustig
5 had tried to get at least one of the convictions
6 expunged or if Lustig was still just pretending he
7 wasn't a convicted felon. Lustig knew there was no
8 mistake of any kind, however, so he was lying once
9 again. He had two different criminal convictions,
10 neither of which were expunged nor would be
11 expunged in the future.

12 Lustig had, in fact, tried to get a
13 conviction in state court expunged as shown in
14 Defendant's Exhibit 5. That case was filed against
15 him for two counts of aggravated reckless driving
16 from when he was 16 or 17 years old. Lustig had
17 filed a petition to seal or expunge that record in
18 the Circuit Court of Cook County on March 4 of
19 2011, probably soon after he lied on the background
20 information form submitted for the liquor license.
21 The state court records show he was given 24 months
22 probation, and that he was arrested during that two
23 years for violation of his probation. Someone,
24 presumably the state's attorney, objected to the
25 motion to seal and/or expunge, and a hearing was

1 held on May 23rd, 2011, at which the motion to seal
2 and expunge was denied.

3 So Grant Lustig went into this meeting
4 with Weiner on May 26, 2011, knowing that his
5 motion to have the state court conviction expunged
6 had been denied three days earlier.

7 Lustig also had been convicted of
8 perjury in federal court for lying to a federal
9 grand jury. He admitted in his testimony at trial
10 that he had pled guilty to committing perjury
11 before a federal grand jury in federal court, so he
12 pled guilty in federal court, though he didn't
13 remember the date. His amended Schedule E
14 identifies a debt owed to the U.S. Department of
15 Justice for \$3200 for "perjury 2010."

16 So even if Lustig had been able to have
17 the conviction from the state court action expunged
18 on the basis that it was committed while he was a
19 minor or some other ground, he still would have a
20 federal conviction for perjury in federal court
21 that he pled guilty to. There is no legal basis of
22 which this court is aware for a 25-year old adult
23 expunging a conviction for perjury in federal
24 court, yet Grant continued to lie, telling Weiner
25 it was all a mistake.

1 In return for Lustig transferring the
2 membership interests, Weiner made a number of
3 promises to Lustig.

4 First, he promised Lustig he would not
5 sue him for lying about his criminal history and
6 causing the collapse of both projects.

7 Second, Weiner promised to get Lustig --
8 to try to get Lustig removed from the guarantee
9 obligations to the two lenders, Gold Coast Bank and
10 SBA.

11 Third, Weiner promised to continue to
12 give Lustig and his family members the 40 percent
13 investor discounts and would extend it, I guess, to
14 four family members.

15 Finally, Weiner told Lustig that if
16 Lustig was right and somehow "it was all a mistake"
17 that he couldn't be on the license, that Lustig
18 could become an investor again down the road if it
19 was legal. So they agreed that if the convictions
20 either had already been expunged or expunged in the
21 future and, in effect, that it was okay with the
22 liquor commission, Lustig could return as an
23 investor, though they did not expressly agree on
24 any economic terms in the event that it occurred,
25 i.e., would he be restored as an investor to his

1 original share, what would happen to the loan
2 guarantee if it was removed, would there be
3 additional contributions required depending on the
4 financial status of the businesses, et cetera.
5 None of this was resolved by the agreement. But at
6 this time, none of that really mattered because
7 Lustig knew full well that the chance that his
8 perjury conviction ever be expunged was zero.
9 Weiner, however, did not know this, so he, in good
10 faith, promised if the liquor commission had, in
11 fact, made a mistake, Lustig could get his shares
12 back.

13 By the end of the meeting on May 26,
14 2011, Lustig agreed to transfer his membership
15 interests to Weiner personally. Weiner took the
16 interests personally instead of transferring back
17 to the corporations themselves, not because he was
18 looking for additional ownership interests for
19 himself, but for two reasons. First, this was his
20 understanding of what the other investors wanted
21 him to do, and, second, if Lustig was telling the
22 truth, and there really was a mistake about his
23 convictions, if the shares had gone back to the
24 corporations, they were gone forever and could not
25 be reconveyed to Lustig. Weiner was trying to

1 structure the transaction so that if Lustig was
2 telling him the truth, he could get the interests
3 back.

4 In his testimony, Lustig denied that he
5 and Weiner had discussed Lustig being sued, getting
6 Lustig off the guarantee, Lustig and family members
7 continuing with the investor discounts and any
8 other benefits that Lustig would get from giving up
9 the membership interests. I did not believe
10 Lustig's testimony on this, and, instead, I
11 believed Mr. Weiner who I found to be a credible
12 witness as I had said.

13 Weiner did not offer Lustig a cash
14 payment for the transfer, and Lustig -- I think
15 Lustig might have admitted it, but at least there
16 was no evidence that he asked for any consideration
17 other than what Weiner offered. Weiner told Lustig
18 that he'd be sued by everybody for causing the
19 failure of the two businesses if he hadn't done
20 this, plus Lustig knew he'd be liable on the
21 guarantee for the expected deficiency, and Lustig
22 didn't argue anything back.

23 So on May 26, 2011, Lustig executed an
24 affidavit that is Plaintiff's Exhibit 2, in which
25 he states that as of May 25, 2011, he owned

1 7 percent of the four entities, and that he,
2 quote -- well, and I quote: "I hereby transfer my
3 entire ownership interest" in those entities to
4 Scott Weiner, a managing member. He further states
5 that a change of ownership amendment will be filed
6 with the proper authorities, including the Chicago
7 liquor commission. And while this has been called
8 an affidavit, and it is an affidavit, it is also an
9 instrument by which Lustig transferred his
10 interests to Weiner.

11 The affidavit was provided to the liquor
12 commissioner on the next day, May 27, 2011, as
13 Weiner had promised to the commissioner, and as a
14 result, the commission did not rescind the liquor
15 licenses for Roots that had been provisionally
16 granted the day before on the condition that Lustig
17 be removed as owner and funder of the business
18 immediately.

19 Lustig and Weiner then entered into a
20 formal document assigning the membership interests
21 in accordance with the requirements of the
22 subscription and operating agreement. Those
23 documents are in Plaintiff's Exhibit 1. The
24 documents say nothing other than the interests are
25 assigned, the assignment is accepted, et cetera.

1 The documents are dated June 7, 2011.

2 There is no writing that memorializes
3 the oral agreement and the exchange -- that in
4 exchange for giving up his interests, Weiner and
5 others would not sue Lustig, Weiner would try to
6 get Lustig out of the guarantees, Lustig family
7 members would continue to get the 40 percent
8 investor discount, and I think I'm forgetting the
9 last one there. So Weiner testified he didn't
10 write it down because he didn't need to have it
11 written down. The basis for the lawsuits, which
12 was the principal bases of the consideration, were
13 eliminated by the transfer of the interests.

14 After Lustig turned over the interests,
15 Roots was able to keep its liquor licenses, and
16 they didn't have any trouble getting licenses
17 needed for the bakery. They did, however, have to
18 incur more debt and spend a lot more money to
19 finish the bakery build out. It cost another
20 1.3 million beyond the amount borrowed from banks
21 and obtained from investors as of May 31, 2011, to
22 finish the bakery build out and get the bakery
23 ready to open when it finally opened in
24 October 2011.

25 Roots opened to the public around

1 June 3, 2011, a couple months after originally
2 planned, and the debt of these companies was more
3 than twice the amount that had been originally
4 planned in the business plan. As I mentioned, the
5 bakery opened in October 2011, but it had a very
6 rocky path. Weiner had not had previous experience
7 with bakeries, so they teamed up with a married
8 couple, the Garcias, who had owned the Bleeding
9 Heart Bakery in another location and had
10 established a name for themselves. The Garcias,
11 however, ended up being a disaster for these
12 entities, as they split up personally, I believe,
13 and the bakery plan did not work out well because
14 of them. There have been three distributions to
15 investors over time to the Roots members but still
16 no distributions at all to investors in the bakery
17 business.

18 Jumping ahead to February 2014. In
19 February 2014, Weiner got a court order from a
20 state court, the Circuit Court of Cook County,
21 ordering him to turn over \$120,000 worth of Grant
22 Lustig's investment in the enterprises to Freeborn
23 & Peters. Freeborn is a Chicago law firm that had
24 represented Lustig, his father Miles, and various
25 entities owned by them, including Lustig Capital.

1 There is no evidence of the scope of the
2 representation, but Freeborn & Peters seem to have
3 represented Lustig, his father Miles, and these
4 various entities, including Lustig Capital, in
5 litigation filed by some of Grant Lustig's
6 creditors, including Wally Posner who testified in
7 this case, as well as William Shepard and others
8 who had invested money with Grant Lustig to fund a
9 high-interest loan business called Workforce
10 Financial. They gave \$3 million to Grant Lustig to
11 use in Workforce starting in the spring of 2010.

12 Beginning in early 2011 and culminating
13 in the summer of 2011, these investors, creditors
14 of Grant, realized Grant had misappropriated a lot
15 of their money, and they sued him and various
16 related entities in state court. It appears that
17 those parties filed suit against Miles and Grant
18 Lustig and various Lustig entities, including
19 Lustig Capital, in August of 2011.

20 Freeborn & Peters then sued Grant Lustig
21 and Miles Lustig and all those entities they
22 represented for failure to pay their attorneys'
23 fees. Freeborn & Peters got two default judgments
24 in that case. The first was a default judgment for
25 \$200,493 against just the corporate entities,

1 Lustig Capital, Client Funding Solutions Corp and
2 W&M Trading Corp, all Lustig-owned entities. That
3 default judgment was obtained November 30, 2012.
4 In January 2014, Freeborn got a second default
5 judgment for the attorneys' fees owed to it. This
6 default judgment was against Grant and Miles
7 personally. The judgment order states that
8 \$200,493 was owed, but that Freeborn had been able
9 to execute on the corporate entities for \$70,000 of
10 that amount, leaving \$130,493 owed. It further
11 held that Grant and Miles were both personally
12 liable and jointly and severally liable for the
13 remaining debt with those corporate entities that
14 included Lustig Capital for the balance of
15 \$130,493.

16 Freeborn had been pursuing citations to
17 discover assets to collect on the default judgments
18 and issued one against Weiner. On February 6,
19 2014, Freeborn filed a motion for turnover against
20 Weiner in the state court action. The motion
21 states that Freeborn learned that Grant Lustig or
22 Lustig Capital may have invested significantly in
23 companies managed by Weiner. It also stated that
24 Weiner gave a citation dep, and that Grant Lustig
25 had invested in two of the companies Weiner

1 manages, but based on a check produced by Weiner
2 showing that 120,000 of the money for Grant
3 Lustig's investment was paid for by a check written
4 by Lustig Capital for the Chicago Division Street
5 Restaurants, LLC, Freeborn asserts in that motion
6 that Weiner continues to control the "investment
7 that was likely made by Lustig Capital rather than
8 by Grant Lustig." That's Defendant's Exhibit 10.

9 Freeborn then asked the court to order
10 Weiner and the Chicago Division Street Restaurants
11 to turn over "all rights, title and interest in
12 Lustig Capital's \$120,000 investment in Chicago
13 Division Street Restaurants" to be applied in
14 satisfaction of Freeborn's judgments against Lustig
15 Capital. Freeborn gave no explanation in the
16 motion for how Lustig Capital had any ownership in
17 Chicago Division Street Restaurants when Weiner
18 testified in citation proceedings and all the
19 documents showed that Grant Lustig personally was
20 the member and not Lustig Capital. Freeborn also
21 failed to mention in the motion for turnover that
22 Grant Lustig was jointly and severally liable on
23 the debt of Lustig Capital, so it really made no
24 difference whether Lustig Capital or Grant Lustig
25 personally own the investment.

1 On February 25, 2014, the state court
2 presiding over the citation proceedings entered an
3 uncontested order stating that "Freeborn's motion
4 to turn over assets filed February 6, 2013, seeking
5 turnover of all rights, title and interest in
6 Lustig Capital LLC's \$120,000 investment in Chicago
7 Division Street Restaurants, LLC, to be applied in
8 satisfaction of Freeborn's judgment against Lustig
9 Capital is hereby granted."

10 Instead of contesting the motion or the
11 order, even though Lustig Capital didn't actually
12 own any interests in Chicago Division Street
13 Restaurants, Weiner complied with the substance of
14 the order and transferred \$120,000 worth of
15 interest in the Chicago Division Street Restaurants
16 to Freeborn, informing Freeborn it would be treated
17 as an assignee of a member, but not as an actual
18 member.

19 Freeborn then continued to pursue Weiner
20 in the state court proceeding, so he decided that
21 rather than fight them and continue to incur
22 attorneys' fees and time and expense, he would
23 negotiate. Weiner and Freeborn then entered into a
24 settlement agreement to resolve all the issues
25 between the parties. In November of 2014, Freeborn

1 accepted a payment of \$40,000 in cash from Weiner
2 for a complete release of any -- of all potential
3 current -- future liability of any type.

4 Through this agreement, Weiner, once
5 again, became the owner of the \$120,000 worth of
6 interests in November of 2014 after paying Freeborn
7 the \$40,000. Weiner testified credibly that he
8 only paid Freeborn the money to end the cost of
9 litigating with them. He didn't give the interests
10 much value at that time.

11 I also note that Freeborn may have
12 asserted that the interest was owned by Lustig
13 Capital and not Grant Lustig individually, even
14 though they knew that Grant was the member of the
15 entities but not Lustig Capital because they wanted
16 to avoid any possible claim for a preferential
17 transfer if Grant filed for bankruptcy, which they
18 undoubtedly knew was a real possibility having
19 represented him.

20 The turnover order doesn't make much
21 sense otherwise because they already had a judgment
22 under which Grant Lustig was personally liable with
23 Lustig Capital for the entire debt, so they could
24 have easily asked for a turnover of what they knew
25 was Lustig's personal member interests in the

1 restaurants directly to pay Grant Lustig's debt to
2 them.

3 And, in fact, Lustig filed a Chapter 7
4 bankruptcy on September 5 of 2014. He listed --
5 2015. He listed an interest in three of the four
6 entities as assets, though it's very odd and
7 doesn't really matter here. Gus Paloian, the
8 trustee in Lustig's Chapter 7 case, filed this
9 adversary proceeding against Weiner attempting to
10 get back the value of the interests or at least
11 what he contends were the value of the interests in
12 the four restaurant entities formerly held by
13 Lustig.

14 So, now, Roman Numeral IV. Section IV
15 of my opinion is entitled Count I and Reasonably
16 Equivalent Value.

17 The most important issue contested in
18 this trial is whether Lustig received reasonably
19 equivalent value for the transfer of his shares to
20 Weiner.

21 Weiner does not dispute that there was a
22 transfer for purposes of Section 165(a)(2) of the
23 Illinois statute for constructively fraudulent
24 transfer or, for that matter, under the section for
25 actually fraudulent transfers. Weiner also does

1 not contest that Lustig was insolvent at the time
2 of the transfer. Therefore, the really only
3 contested issue in the case is whether or not
4 Lustig got reasonably equivalent value for the
5 transfer.

6 To determine this, I have to evaluate
7 both the value of his interests at the time of the
8 transfer and the value of what he got in return.
9 The essence of a fraudulent transfer claim is that
10 the debtor's creditors are deprived of the value
11 they would have had in an asset if the debtor had
12 not transferred it to someone else.

13 While the value of the transfer is often
14 thought of in terms of what benefit the debtor
15 received versus the value that he gave up, the
16 important concept to remember is that the court
17 should be determining what Lustig's creditors lost
18 because of the transfer.

19 This case is unusual because it is
20 virtually undisputed that the value of these
21 enterprises without the liquor licenses at the time
22 of the transfer was essentially zero. In fact, it
23 was less than zero. Therefore, the transfer cannot
24 be avoided as constructively fraudulent. If Lustig
25 had held on to the membership interests, his

1 creditors would have never obtained any value from
2 them. Lustig's creditors and, therefore, the
3 trustee standing in their shoes are not entitled to
4 recover more from a transferee than what they would
5 have gotten from the debtor if he hadn't
6 transferred them in the first place.

7 Weiner testified that if they had not
8 gotten the liquor licenses when they did in
9 May 2011, both the pizza and bakery enterprises
10 would have failed almost immediately. The trustee
11 offered no evidence to contest this assertion.
12 They didn't even argue that it wasn't true.

13 I find that Weiner was right. The pizza
14 business depended on alcohol sales for 50 percent
15 of its revenue. Without the ability to sell
16 alcohol, it would not have been able to even break
17 even, let alone pay secured debt or have any hope
18 of making a profit or paying anything out to
19 investors. A huge portion of the restaurant was
20 bar space, seating 65 people, which would be
21 useless without the ability to sell alcohol. And
22 at that point in time, they needed 1.3 million more
23 dollars than they already had from the investors,
24 the bank, the SBA, to complete the bakery build out
25 and open the bakery still a number of months down

1 the road. Without revenue from the pizza
2 restaurant, they would not have been able to find
3 more funding and complete the bakery build out so
4 that business could have opened. In fact, the
5 lender could have declared a default as soon as the
6 liquor license was denied, which would have been
7 before either opened its doors.

8 So on May 26, 2011, the going concern
9 value of the entire enterprise to Grant Lustig with
10 Grant Lustig as a member was essentially zero.
11 With Lustig as a member, both businesses would have
12 failed. There is no point in opening, and -- I'm
13 sorry, a lot of this is repetitive. I did not have
14 enough time to edit this down. So, in fact, the
15 value of the investment to Grant Lustig and,
16 therefore, to his creditors on May 6, 2011, before
17 he executed the affidavit was less than zero
18 because Lustig would have lost not only the entire
19 investment of \$370,000 from the failure of the
20 business caused by their failure to get a liquor
21 license caused by his lying about his convictions,
22 he would have been liable on the guarantee of the
23 loans.

24 As Mr. Brackett credibly explained --
25 Mr. Brackett is Mr. Weiner's expert -- the value of

1 the assets would not cover the liability to the
2 lenders, so Lustig and the other guarantors would
3 owe the lenders on their guarantees and in addition
4 to losing their entire investments. Brackett
5 testified that the enterprise had a value at the
6 time of a negative 1.5 million. While that value
7 may have been somewhat higher based on factors I'll
8 discuss in a few moments, I find that the deficit
9 to the bank would have been at least \$790,000, and
10 Lustig would have been liable for that amount with
11 the other guarantors. So at this time, with Lustig
12 as a member, his membership interests were
13 worthless to him, and he would very likely be held
14 liable on guarantees for a deficiency that would
15 have been at least \$790,000. Lustig's creditors,
16 therefore, lost nothing when he transferred the
17 interests to Weiner. If Lustig had kept them
18 instead of transferring them, there would have been
19 no value to any of his creditors, and his liability
20 on the guarantees would have simply increased the
21 amount of debt he owed his creditors to be paid
22 from his limited assets. Plus, Lustig would have
23 faced significant claims from Weiner, Mohr and the
24 entities themselves, and probably his fellow
25 investors, for causing the demise of both

1 businesses by his intentional lies. All of this
2 was avoided by transferring the interests to
3 Weiner.

4 The trustee failed to provide any basis
5 for concluding that a creditor in a fraudulent
6 transfer action is entitled to more after the
7 transfer than it would have gotten if there had
8 been no transfer. As Judge Hollis explained well
9 in the *Bidgeview* case, *Official Committee of*
10 *Creditors v. The Fountainhead Group, et al.*, when
11 evaluating whether there was reasonably equivalent
12 value in a fraudulent transfer action, "whether the
13 debtor received a reasonably equivalent value is
14 analyzed from the point of view of the debtor's
15 creditors, because the function of this element is
16 to allow avoidance of only those transfers that
17 result in a diminution of a debtor's prepetition
18 assets." And I'm not going to recite all those
19 cases I cited earlier. But that you focus on the
20 net effect to unsecured creditors. If they are no
21 worse off after the transfer, then there was no
22 fraudulent transfer.

23 In *Bidgeview*, Judge Hollis held that a
24 debtor's transaction giving up a \$3.5 million
25 promissory note in exchange for a \$700,000 cash

1 infusion provided reasonably equivalent value to
2 the unsecured creditors because they would receive
3 nothing from the proceeds of that \$3.5 million note
4 that had been cancelled, while the 700,000 of cash
5 from the cash infusion would have been available
6 for unsecured creditors. So even though it may
7 have appeared that there was an unequal exchange in
8 that case in light of the large difference between
9 the \$3.5 million note and the \$700,000 they took
10 instead, when viewed from the point of view of what
11 unsecured creditors would have before and after the
12 transfer, there was reasonably equivalent value,
13 and she so held.

14 In this case, there was essentially no
15 value to Lustig from his interests in the LLCs
16 right before he transferred them and, therefore, no
17 value to his creditors that could have been
18 recovered had he not transferred the interests. In
19 fact, the trustee, perhaps implicitly, recognizes
20 this because he really seems to be arguing that
21 Lustig was required to transfer the shares for the
22 benefit of the creditors, but he should have gotten
23 a better deal. The trustee cites no authority for
24 the proposition that the debtor is obligated to get
25 more value for his creditors than he could get for

1 himself. This is just not the way it works.

2 The following illustration -- the
3 following illustrates the trustee's position. It
4 is not perfect, but at least it's an example. A
5 hypothetical. Let's assume a debtor owned a car,
6 but the engine did not work. The debtor then gave
7 the car to a friend because it had no value to the
8 debtor. The friend then buys and installs a new
9 engine. If the trustee were correct, the friend
10 would have to give up the car with the new engine
11 even though the value was provided by the
12 transferee and the car had virtually no value when
13 it was transferred without the engine.

14 So here, the restaurant interests had no
15 value on May 26 because Lustig was the owner.
16 Creditors, therefore, lost nothing when he
17 transferred them to Weiner without obtaining cash
18 or a promise to pay cash in the future from Weiner.
19 And as I will discuss below, Lustig did receive
20 value from the transaction through the various
21 promises made by Weiner, but those need not even be
22 considered to reject the trustee's arguments in
23 this case. See -- this is vaguely relevant -- 8000
24 *Md., LLC v. Huntleigh Financial Services, Inc.*, 292
25 S.W.3d 439, 451, 2009 No.App.Lexis 1079 -- sorry,

1 it's not a great cite but -- Missouri Appellate
2 Court 2009, for the proposition that result in a
3 fraudulent transfer action should not place the
4 plaintiff in a better position than it would have
5 been if the fraudulent transfer had not taken
6 place. That's really the key.

7 I note this may seem like an unusual
8 result at first glance, but this is an unusual
9 case. The debtor owned an asset that had no value
10 to the debtor or his creditors if he owned it, but
11 that could have potential value only if he
12 transferred it. So the trustee's case really is
13 that the debtor should have transferred the assets,
14 but that he was obligated to get a better deal for
15 his creditors. The trustee cites no cases for
16 this, and I reject that theory.

17 I'm also going to note here, although it
18 doesn't flow well, but I haven't had time to make
19 it flow better, that the evidence in this case
20 shows that there were, in fact, no willing buyers
21 of those interests at this time. Weiner was not
22 willing to pay Lustig anything for them because the
23 interests themselves had no significant monetary
24 value to Weiner at the time. He already owned
25 around 35 percent of the interests in the

1 companies, and he wasn't looking for a bigger
2 percentage, and he didn't have money to pay
3 anything to Lustig. He just needed Lustig out of
4 the business so that it would not fail, and the
5 easiest way to achieve that immediately, as was
6 necessary, was for Lustig to transfer them to
7 Weiner personally. But there were no other
8 potential buyers for these shares at the time. In
9 fact, Weiner had been looking for more investors
10 and lenders to provide the additional 1.3 million
11 he needed, and he wasn't finding any. So these
12 parties were operating in the real world, not some
13 idealized perfect market with full information to
14 everyone and plenty of time to assess value and no
15 compulsion on either side.

16 Trustee has failed to prove there was
17 anyone in the world who would potentially want to
18 pay any money to Lustig or even give him a note for
19 future payments of these interests, either at time
20 of the transfer or at any time in the future up to
21 the present.

22 Now that I've finished that detour, let
23 me return to the valuation analysis.

24 This is Subsection capital A of my Roman
25 Numeral IV section of Count I and Reasonably

1 Equivalent Value.

2 So, capital A, Trustee's Valuation
3 Theories.

4 So instead of focusing on what creditors
5 would have gotten if Lustig had not transferred the
6 shares, which is nothing, the trustee argues that I
7 should look at the value of the interests at the
8 time in the general marketplace, which is presuming
9 Lustig is not a member, so the businesses can
10 operate with liquor licenses. That is, I shouldn't
11 look at the value that Lustig or his creditors
12 would have had if he had held on to the interests,
13 but instead look at their fair market value which
14 the two experts explained is the value a
15 hypothetical buyer would pay to a hypothetical
16 seller acting in an arm's length in an open and
17 unrestricted market where there is neither a
18 compulsion to buy or sell and when both have
19 reasonable knowledge of the relevant facts. I
20 reject this is the appropriate way to evaluate the
21 loss to creditors in this case, but even using this
22 approach would not make Weiner liable for a
23 fraudulent transfer.

24 Subsection 1 under Section A, the
25 heading is Valuation Based on Glaysher Subscription

1 Payment Made in May 2011.

2 The trustee's first argument about how
3 to calculate the value of Lustig's interests, and
4 the only one the trustee made in its case in chief,
5 is that the value should be calculated based on a
6 payment made by one of the subscribers in May 2011.
7 Even if I accepted the premise that I should ignore
8 what Lustig's creditors would have gotten if he
9 hadn't transferred the interests, and should
10 instead focus on what those interests would have
11 sold for under the idealized definition of fair
12 market value, this argument would fail.

13 The trustee contends I should take the
14 value of a half percent interest purchased by one
15 of the original subscribers before October 12,
16 2011, the Glayshers, which I believe is spelled
17 G-L-A-Y-S-H-E-R, and multiply that to get a
18 7 percent value for the Lustig share as of May 26,
19 2011. I reject that approach as not being valid in
20 light of all the facts that affected value as of
21 May 26, 2011.

22 The Glayshers became subscribers by
23 signing a subscription agreement sometime before
24 the date of the operating agreement, which is
25 October 12, 2010. At that time in 2010, they made

1 an irrevocable commitment to pay \$17,500 for a
2 one-half percent interest in both the bakery
3 operating company and the real estate company for
4 the bakery, and also a \$17,500 payment for a
5 one-half percent share of the pizza operating
6 company and the pizza real estate company.

7 The Glayshers owed that money before
8 October 2010, but didn't actually pay it until May
9 of 2011. The trustee therefore asserts that I
10 should view their payment in May 2011 as a "current
11 market transaction" that reflects the value of a .5
12 interest in May 2011. The trustee argues that I
13 should therefore determine that a half percent of
14 each of these entities is worth 17,500, and,
15 therefore, a half percent of all the entities is
16 worth \$35,000, so a hundred percent of the
17 interests for all four entities is worth
18 \$7 million. Lustig's 7 percent share of \$7 million
19 would then be worth \$490,000 just doing simple
20 math. The Glayshers payment of the 17,500
21 contributions in May 2011 does not, however,
22 reflect the value of the enterprises at that time,
23 nor at any time, but instead only represents
24 payment of a contractual obligation made before
25 October 12, 2010.

1 The trustee's argument has many flaws,
2 some of which will be discussed later when I deal
3 with the two experts. But even without looking at
4 expert testimony, I find that the amounts charged
5 for particular interests were not intended to and
6 did not, in fact, reflect the value of the
7 enterprises. Instead, as Weiner testified, Weiner
8 and Mohr began with the principle that they were
9 wanting to own 65 percent of the entities. Then
10 they figured out how much investor capital they
11 would need to get bank loans and working capital.
12 They determined they needed to raise about
13 \$1 million from private investors for each
14 restaurant, so they created an investment structure
15 that got them what they wanted, got them the money
16 from investors that they thought they needed, and
17 then it provided some benefits for people who
18 wanted to invest more and an extra 1 percent to
19 those who were going to guarantee the loans. This
20 is how they came to that number of 17,500 for the
21 half percent of two of the entities. Thus, the
22 investment amounts were not intended to reflect the
23 actual value of the enterprise at any particular
24 time, and they did not reflect that value.

25 In fact, under this theory of value, the

1 trustee is asking me to conclude that Lustig's
2 \$370,000 investment in the -- the checks were
3 really written in May of 2010, but really the whole
4 thing came together in October of 2010, so between
5 October 2010 and May 26, 2011, that his investment
6 had increased in value by \$120,000, the difference
7 between 370,000 that he paid in back in 2010 and
8 the 490,000 that the trustee contends that Weiner
9 owes for the 7 percent share doing the
10 multiplication that I said. This increase, if I
11 did the math right, which is not always assured,
12 but this is an increase in value of approximately
13 32 percent, if I calculated it right, over what
14 Lustig paid in for those interests for an
15 enterprise that had taken on almost twice as much
16 debt as was anticipated in October 2010, all of
17 which debt was senior to the investors' interests,
18 and which significantly increased the amount of the
19 debt Lustig guaranteed when there were huge cost
20 overruns and the bakery needed an additional
21 1.3 million to even open its doors, let alone break
22 even or succeed, and it was already at least six
23 months behind schedule.

24 Frankly, this argument, which is really
25 all the trustee offered in its case in chief,

1 boarders, dare I say it, on the frivolous. Even
2 without considering expert testimony, I would
3 reject this position as not supported by the
4 evidence and as not reflecting the realities of
5 these entities at that time in May of 2011 when
6 they were in a very precarious position.

7 Evidence -- so I make that conclusion
8 just from all the numbers without experts crunching
9 any present values. But the evidence provided by
10 the experts also supports this conclusion.

11 It was Mr. Weiner, not the trustee, who
12 proffered expert testimony to try to present a more
13 realistic estimate of the value of the enterprise
14 as of the transfer. Mr. Brackett, Weiner's expert,
15 used two different analyses to support his view
16 that the enterprise had no value as of the
17 valuation date.

18 As I stated earlier, I believe the
19 correct analysis for the fraudulent transfer claims
20 is to look at the value that the enterprises would
21 have had if Lustig still owned them. While
22 Brackett didn't frame the issue this way, his
23 analysis supports the court's conclusion that the
24 enterprise had value when Lustig was a member --
25 oh, I'm sorry -- had no value with Lustig as a

1 member.

2 Brackett's analysis, while flawed in a
3 number of ways, also supports the conclusion that
4 even if you look at value that was achieved only
5 after the transfer and did not exist for Lustig or
6 its creditors before the transfer, the trustee
7 still cannot prevail.

8 So that was Section 1 of my Trustee's
9 Valuation Theories. Section 1 was about the value
10 based on the Glaysher payment.

11 Section 2 is on to Expert Testimony
12 Generally.

13 Two experts have testified about the
14 value of the combined enterprise on June 7, 2010.
15 As I said, I'm looking at May 26, 2010, as the
16 transfer date because that allows me to look at the
17 value before and after the transfer better in this
18 case, but the actual numbers don't change whether I
19 use May 26th or June 7th as the date.

20 As often happens, we have a battle of
21 experts with each expert producing an opinion that
22 supports their client's interests. So we have the
23 trustee's expert artificially inflating his value
24 in a number of ways, while Mr. Weiner's expert made
25 similar errors -- I won't say similar errors -- but

1 artificially decreased the value and made errors
2 that resulted in the value being too low.

3 I note Brackett chose to evaluate value
4 on June 7, 2011, the date that the transfer
5 documents were executed. Mr. Gordon, the trustee's
6 expert, therefore, adopted the same date. As I
7 said before -- I'm sorry this is repetitive -- the
8 actual date of the transfer for my analysis is
9 May 26, 2011, the date on which the liquor
10 commission was denying the license and only agreed
11 to grant the license upon Weiner's promise to have
12 an affidavit from Lustig removing himself from
13 ownership and the lending to the entities within 24
14 hours. That affidavit was executed by Lustig on
15 May 26th, and in that document, he transferred the
16 interests to Weiner. The later documents executed
17 on June 7, 2011, merely met the formal requirements
18 for the organization to accept Weiner as the new
19 owner of those shares. I therefore find that May
20 26th is the proper date to value Lustig's interests
21 and the benefits that he got from that transaction.
22 But there is no material difference between the
23 numbers that should be used for as of May 26th
24 versus June 7th for any valuation, so I'm not
25 adjusting numbers that the experts used for this

1 reason.

2 Neither expert used a methodology that
3 worked in a way that produced a result that I can
4 adopt, so I've had to adjust their analyses when
5 possible to determine values that make sense in
6 light of the precarious position of the entities
7 when Lustig still held them on the day of the
8 transfer, May 26, 2011.

9 Subsection 3 of this section is entitled
10 Net Asset Value.

11 First, Mr. Brackett, who is Weiner's
12 expert, testified that the combined entities had a
13 negative value on the date of the transfer, and he
14 was not even evaluating the enterprise without a
15 liquor license. He assumed a going-concern value
16 in which the restaurant entities had liquor
17 licenses.

18 To reach his conclusion, he performed
19 two different analyses.

20 First, he offered what he called a net
21 value -- net asset value analysis. For this
22 analysis, he looked at the book value of assets and
23 made adjustments for their value to reflect a
24 static value of the enterprise on the valuation
25 date. He relied on a real estate appraisal that is

1 in Plaintiff's Exhibit 16 in which the appraiser
2 appraised the two properties to be used for both
3 restaurants together for the Gold Coast Bank and
4 the SBA, and that was as of April 26, 2011, so one
5 month before the transfer.

6 The appraiser gave two values: An as is
7 value as of the date of the appraisal on April 26,
8 2011, when some of the planned improvements had
9 been completed, but many had not been completed.
10 The value he gave as of the actual date of the
11 appraisal was approximately \$2.8 million for both
12 properties combined. The appraiser also gave an
13 estimate of a projected value taking into account
14 improvements that were planned for the future but
15 not yet completed. That value, the as expected
16 when completed value, was \$4.9 million together for
17 both properties.

18 Brackett knew that the improvements to
19 the bakery property weren't anywhere near complete
20 as of his valuation date of June 7, 2011, that
21 \$5.9 million in loans had already been taken out by
22 the companies, and that they would still need an
23 additional \$1.3 million more in addition to the
24 money already provided by the lenders under those
25 4.9 million in loans to get the property into the

1 state -- completed state that the appraiser
2 anticipated and that to which he gave a
3 \$4.9 million value.

4 Brackett reflected this in his net asset
5 valuation by using the as is value of the
6 appraiser, which was approximately 2.8 million as
7 of April 26, instead of the completed future value
8 of 4.9 million.

9 When Brackett added up all the values in
10 the list of assets, and he deducted the 5.9 million
11 of debt as of valuation date that he used, the
12 total net asset value was a negative 1.5 million.
13 You can see this in his table on Page 17 of his
14 report in what he calls Note 3 on "adjusted net
15 tangible value method."

16 Michael Gordon, the trustee's expert,
17 criticized Brackett's net asset value approach on a
18 number of grounds. First, he said the net asset
19 approach works best as a valuation method for
20 holding companies. They're holding financial
21 assets and themselves -- and those assets
22 themselves that they're holding are generating the
23 income for the enterprise. He stated that this
24 method, this net asset value method, is not
25 appropriate for an entity that generates cash by

1 sales to the public. The value of that kind of
2 entity, he contended, should be determined by a
3 discounted cash flow analysis and perhaps a market
4 analysis.

5 In Brackett's view, however, when you
6 have restaurant businesses that have not reported
7 even one week of sales, a discounted cash flow is
8 very speculative and inappropriate, and is
9 especially inappropriate here where the cash flow
10 projections were created back in May 2010, and it's
11 now, for his purpose, June 2011 with not a single
12 week of sales recorded on the books.

13 Both experts made valid points on this
14 issue. The net asset value approach is not ideal
15 for an operating company that is generating future
16 sales revenue. But I also agree with Brackett that
17 the cash flow projections in the business plan are
18 highly speculative, and the discounted cash flow
19 method is much less persuasive than it would be if
20 there had been a record of actual sales to use as a
21 basis for making the projections of future sales.

22 Now, I'm only on Page 22 just so you
23 know. I'm sorry.

24 Brackett testified that the net sales
25 value gives an idea of what the assets could be

1 sold for as of the valuation date. While he also
2 said he considered these assets in the context of
3 businesses operating as a going concern, this
4 approach gives me the best evidence presented of
5 what the company would be worth to Lustig's
6 creditors just before the time of the transfer if
7 he had not transferred them. If Lustig refused to
8 transfer the interests, Roots would have soon gone
9 out of business, having lost its liquor license,
10 and the bakery property would never have been
11 finished to be able to operate at all or to be sold
12 by a bank for anything -- anything near the
13 estimated completion value of 4.9 million given by
14 the real estate appraiser.

15 So I reject Gordon's position that the
16 net asset approach used by Brackett should not be
17 used at all in this case. Instead, I think it best
18 reflects the value to Lustig of his interests at
19 the time of the interest.

20 In addition to attacking the use of this
21 method at all by Brackett, Gordon said that
22 Brackett made errors in how he calculated net asset
23 value. One criticism involved 29,000, so it's not
24 significant.

25 The other alleged error that Gordon

1 thinks Brackett made is greater in size, but I
2 reject Gordon's position for the most part. Gordon
3 said that Brackett was wrong to use the real estate
4 appraiser's as is value as of April 26, 2011, the
5 date of the real estate appraisal, that reflects
6 the construction that was actually completed as of
7 that date. Gordon says you have to use the full
8 appraisal value for the future assuming that all
9 planned improvements are completed, even though it
10 would cost 1.3 million more than what was loaned as
11 of June 7, 2011, to get that to that value.

12 Mr. Gordon contends, in effect, that the
13 businesses took the loans for improvements before
14 the valuation date that was supposed to be enough
15 to complete construction, so he's saying that the
16 value of those loans must be there and should be
17 reflected by using expected value upon completion
18 of the improvements. Put another way, he said if
19 the debtor took the full amounts of the loans
20 available, all of that value must be on the asset
21 side of the balance sheet, so you have to include
22 the value at completion of the improvements to
23 reflect that.

24 This argument was not persuasive. There
25 were significant cost overruns and delays in

1 construction. Brackett took into account the
2 actual situation on his valuation date of June 7th.
3 Though I would use May 26th, it makes no difference
4 here. The entities needed to spend an additional
5 1.3 million to complete the bakery build out and
6 get it ready to open after this valuation date, so
7 after the money from the loans reflected in
8 Brackett's net asset value were taken and spent or
9 perhaps held in cash, but nonetheless already
10 reflected in his net asset value. It therefore
11 inflates the value of the assets in the net asset
12 valuation if you pretend that the real estate is
13 actually worth 4.9 million on the valuation date
14 when it will cost an additional 1.3 million above
15 the amount already borrowed on the valuation date
16 to bring the property to the condition that would
17 justify a \$4.9 million future valuation.

18 Now, while some work was undoubtedly
19 done on the Roots property between April 26, the
20 appraisal date, and May 26, the transfer date, that
21 should be included in the value of the property as
22 of May 26th, it does not affect the bottom line of
23 Brackett's analysis. He used the as is value in
24 the appraisal, which was 2.8 million, in his
25 adjusted net tangible asset value found on Page 17

1 of his report. Using that value and subtracting
2 liabilities, including the total debt of
3 5.9 million, he came to a total net asset value of
4 negative 1.5 million.

5 The renovation of the Roots property
6 must have been pretty close to completion at the
7 time of the appraisal on April 26 because they were
8 fully stocked and ready to open with staff hired
9 and trained by Memorial Day weekend of 2011 when it
10 was opening to friends and family. Memorial Day in
11 2011 was on May 30th I happen to know, so Roots
12 opened privately just a day or two after the
13 transfer was made on May 26, 2011. So it had to be
14 pretty close to completion when the appraiser
15 inspected the property on April 26, approximately a
16 month before it opened to friends and family. The
17 renovation of the bakery property, on the other
18 hand, was nowhere near completed on April 26th or
19 May 26th.

20 I therefore conclude a reasonable value
21 to use for the real estate value in the net asset
22 approach is better achieved by taking the
23 appraiser's future value, which is 4.9 million, and
24 deducting the 1.3 million needed to get it to that
25 condition. So I would use a land and building

1 value of 3.6 million, not the 2.85 used by Brackett
2 and not the 4.9 used by Gordon in his revision of
3 Brackett's net asset analysis in Gordon's report,
4 Plaintiff's Exhibit 17 at Exhibit 1 to Gordon's
5 report.

6 Using Brackett's number in making my
7 judgment for the actual state of the real estate on
8 May 26th, the net asset value is still a negative
9 \$790,050. I did not find persuasive or credible
10 Gordon's argument that the net asset value had to
11 reflect the finished value of the property in the
12 future merely because the total amount of the
13 5.9 million in loans had been received and spent.
14 That was simply not the financial reality on
15 May 26th.

16 While both experts testified that the
17 net asset value approach was not intended to
18 generate a liquidation value, and Gordon suggested
19 that such analysis would require a completely
20 different analysis, the liquidation value would
21 most likely be less than this value because
22 Brackett was evaluating assets for the going
23 concern value, not how a bank or other party
24 liquidating would dispose of the assets. He used
25 the book value of most assets, other than the real

1 estate, which is really a cost, and it is unlikely
2 those assets would be sold for their book value
3 after businesses failed and its assets are being
4 sold to satisfy bank debt. Brackett's net asset
5 value as I reduced it reflected improvements made
6 between April 26th and May 26th, and that is the
7 best evidence in the record of the net value of the
8 business on May 26, 2011, when Lustig transferred
9 his assets, and it's most likely higher than a
10 liquidation value would actually have been, so the
11 trustee gets the benefit of the doubt here.

12 So rounding up the net asset value to a
13 negative \$800,000 as of May 26th, Lustig's
14 investment had no value to him on the valuation
15 date, and, in fact, it generated significant
16 liability from the guarantee of bank debt that
17 could not be satisfied from the assets of the LLCs.
18 Brackett's net asset value analysis therefore
19 supports my conclusion that Lustig's interests in
20 the four companies had no value that could have
21 been retained for the benefit of creditors if he
22 had not transferred them.

23 Okay. Subsection 4 of my analysis and
24 valuation is called Trustee's Fallback Position,
25 Discounted Free Cash Flow Analysis.

1 As I stated earlier, the trustee's
2 primary position in this case is that I should
3 decide that the enterprise had a value of 7 million
4 on the valuation date, the transfer date, because
5 the Glayshers paid their subscription at that time.

6 Only after Weiner hired an expert to
7 value the interests did the trustee hire his own
8 expert who criticized Weiner's expert and then
9 offered his own analysis.

10 So both experts performed a discounted
11 cash flow analysis to estimate the value of the
12 enterprise after Lustig transferred his assets, so
13 assuming that the businesses had valid liquor
14 licenses.

15 Again, while I don't think these
16 analyses reflect the value that Lustig had when he
17 owned the interests, I will discuss them to show
18 that even if I accepted the unspoken premise of the
19 trustee's position that I shouldn't look at what
20 the interests were worth when Lustig was the owner,
21 but instead should value them as though a non-felon
22 capable of getting a liquor license owned them, the
23 trustee still does not prevail.

24 The discounted cash flow analysis of
25 both experts contain serious flaws, although Mr.

1 Gordon's was more flawed than Mr. Brackett's
2 analysis. As I noted earlier, although Mr. Gordon
3 testified that the discounted cash flow method was
4 the best way to estimate value of a retail
5 operation that expected sales to the public, he
6 refused to acknowledge the serious weaknesses of
7 any such analysis based on sales projections
8 estimated in May 2010, a year before Roots opened
9 and a year-and-a-half before the bakery would open.
10 I agree with Brackett's concern about basing the
11 value of these companies solely on projections that
12 were all theoretical before one week of sales has
13 occurred. I've nonetheless looked at both expert's
14 analyses and find as follows:

15 Subheading capital A, Brackett's
16 Discounted Cash Flow Analysis.

17 Brackett calculated a value based on a
18 discounted cash flow to the enterprise using the
19 revenue projections created in May of 2010 that
20 were included in the business plan. Brackett then
21 had to determine the appropriate discount rate to
22 apply to the stream of earnings to determine the
23 present value. He wanted to look at the value to
24 equity, as in a holder of an interest in the LLCs,
25 someone who would be purchasing Lustig's membership

1 interests so he had to calculate the equity cost of
2 capital.

3 He included -- he -- I should say he
4 used an analysis that Gordon didn't really quibble
5 with using the riskless rate from U.S. 20-year
6 Treasuries, an equity risk premium, and an industry
7 risk premium, all of which are commonly used by
8 professionals in business valuations and are
9 obtained from accepted industry sources as
10 discussed on Page 20 to 21 of Brackett's report,
11 which is Plaintiff Exhibit -- I think it might be
12 15. He also included a size premium, which
13 Ibbotson calculates annually, which imposes more
14 risk on the smallest segments of businesses which
15 these companies in this case fall into as discussed
16 on Page 21 of his report. He then included -- this
17 is Brackett -- then included a company specific
18 risk factor to reflect the added risk for this type
19 of investment, a small non-chain restaurant
20 operation that has no actual sales yet, so no track
21 record, and a lot of financial problems before
22 either of the two restaurants even opened. From
23 these factors, he concluded that the cost of equity
24 to be applied to the discounted cash flow is
25 25 percent.

1 He then used company projections to
2 determine projected cash flow as shown on pages 22
3 to 23 of his report. He deducted all operating
4 expenses using the same business plan projections
5 from the expected income and came up with a
6 combined free cash flow for all of the enterprises
7 before taxes on the bottom line of Page 23 of his
8 report for each of the first five years of
9 operations, which are the only years for which he
10 had projections. Then he used a terminal value for
11 the remaining years.

12 The only adjustments he made to the
13 projections were -- from over a year earlier that
14 had been created in May of 2010, was to add an
15 extra interest expense to reflect only the interest
16 due on the additional debt that had not been
17 anticipated in the business plan and projections
18 that had been incurred by June 7, 2011. He did not
19 include anything to reflect the additional debt the
20 enterprises would have to take on to complete the
21 bakery project, so he did not include extra
22 interest expense from that expected borrowing or
23 anything to reflect the payment of principal for
24 that additional debt. So his model underestimated
25 the interest and debt repayment that would

1 undoubtedly be required if the bakery was to
2 operate.

3 He also reduced the 25 percent cost of
4 equity by 3 percent, I think, to reflect expected
5 annual growth, so his actual discount rate that he
6 applied was 22.4 percent as discussed on Page 25 of
7 his report. He then crunched the numbers to get a
8 present value of the combined enterprises before
9 debt service, meaning after paying interest but
10 before paying principal, of approximately
11 \$2.3 million. Then Brackett simply deducted the
12 full amount of the debt outstanding on his
13 valuation date of June 7, which was \$5.9 million,
14 and he came to a total of a negative 3.6 million
15 dollars as his net asset value for the enterprises.

16 Not surprisingly, Mr. Gordon offered
17 many criticisms of Brackett's approach, some of
18 which were valid.

19 First, Mr. Gordon credibly testified
20 that Brackett mixed and confused two different
21 approaches, cash flow to the enterprise versus cash
22 flow to equity. While Brackett said he was
23 attempting to determine the net value -- the net
24 value -- the value of equity -- the value to equity
25 of the enterprise, he didn't do it correctly.

1 Although Brackett's overall methodology throughout
2 the process was correct, Brackett erred
3 significantly when at the end of his analysis,
4 after he discounted the cash flows back to the
5 present value, Brackett inexplicably then just
6 deducted the entire outstanding debt in a lump sum
7 instead of balancing out those expected payments
8 over time.

9 Gordon credibly explained that either
10 one of two approaches can work in a discounted cash
11 flow analysis and should get you to a similar
12 result if done properly, whether it's the cash flow
13 to the enterprise approach or the cash flow to
14 equity approach. With cash flow to the enterprise,
15 you take operating profit, sales minus operating
16 costs, you subtract cash flow adjustments like
17 adding back in depreciation and subtracting
18 increases in working capital, et cetera. From
19 this, you get cash flow to the enterprise. You
20 then apply discount rate, which for this approach
21 is the weighted average cost of capital or WACC,
22 W-A-C-C, to get a present value of cash flows to
23 the enterprise. And then, to determine the value
24 to equity, which is what we want in this case, you
25 subtract the current total value of the debt in a

1 lump sum, which gives you the value to equity. So
2 this is the approach -- oh, I am sorry. That gives
3 you the value to equity. This is the approach that
4 Gordon used.

5 Brackett said he was using the cash
6 flow -- cash flow to equity approach as opposed to
7 cash flow to enterprise. So under that method, you
8 start with operating profit and subtract
9 adjustments just like you would for cash flow to
10 the enterprise approach. From the values -- those
11 values, you subtract interest payments on debt and
12 expected repayment of principal on the debt over
13 time which resulted in a cash flow to equity. And
14 so then you project interest and principal
15 repayments over time and discount it all back to
16 the equity cost of capital to get the equity value.

17 Brackett did the expected cash flow
18 analyses, though Gordon criticizes some of those
19 details, and then he deducted interest payments
20 over time, but instead of projecting debt repayment
21 over time and discounting back using the equity
22 cost of capital, he just deducted the debt in a
23 total lump sum, which, essentially, invalidated the
24 result.

25 So Brackett saw that Gordon's report

1 criticized his analysis and attempted to rebut a
2 number of Gordon's criticisms, but he did not
3 really contest this criticism in any meaningful
4 way.

5 Gordon also criticized a lot of
6 Brackett's choices for what to include for income
7 and expenses, some of which were valid criticisms
8 and some were not. I'm going to go through four of
9 five of those right now. Hopefully, that won't
10 take that long.

11 Subparagraph 1, Depreciation Error.

12 One valid criticism of the cash flow
13 analysis used by Brackett is that while it is
14 appropriate to deduct expense for depreciation from
15 the initial analysis of income minus expenses,
16 because you're analyzing cash flow, the
17 depreciation amounts are added back in to get
18 accurate cash flow numbers to discount. Brackett
19 admitted he made an error by including depreciation
20 on Roots, the pizza operating company, resulting in
21 an \$87,000 a year underestimation of cash flow.
22 Actually, I think what he should have -- I said
23 that wrong. He should have added it back in to the
24 cash flow. He was correct in originally
25 subtracting it but should have added it back in,

1 and he did not do that. Brackett claimed that the
2 depreciation mistake was a wash, but he didn't
3 explain why, and I accepted Gordon's testimony this
4 was not a wash but an error of \$87,000 of cash flow
5 per year.

6 Number 2, Apartment Rental Income.

7 Gordon also testified that Brackett
8 erred in not including what was significant rental
9 income that the entities could have achieved from
10 renting four apartments in the two buildings. The
11 real estate appraisal described four apartments and
12 some planned renovations to them. The appraiser
13 also noted that some renovations originally
14 planned, like to the kitchens, were not going to be
15 done. The real estate appraisal reflects a
16 potential rental value of \$1,350 per apartment,
17 which is incorporated into the estimated future
18 value of the overall properties after renovations
19 are completed.

20 Based on the real estate appraisal,
21 Gordon contended that investors would expect assets
22 to be used at their highest and best use, and so
23 you must include 1350 per month times four
24 apartments into the income stream. Gordon never
25 visited the properties. Brackett did and knew the

1 apartments were not rented out. They were not
2 rented out at the time of the valuation date, and
3 they were not rented out when they went there.

4 Weiner also testified credibly that at
5 the time of the valuation, two apartments were
6 occupied with previous renters, but they were not
7 paying any rents because the construction made the
8 apartments basically unlivable. He also said the
9 rental rate that had been being paid was \$900 a
10 month. So at the time of the valuation, there was
11 no rental income from apartments. Although some
12 renovations were theoretically planned, there is no
13 evidence they were carried out at that time and
14 that the apartments would, in fact, be rented or at
15 what price. Weiner also testified at least one of
16 the apartments was used as an office for the
17 business, which is an appropriate use of the space
18 of the enterprise.

19 The appraiser did not testify at trial
20 and, therefore, provided no evidence that persuaded
21 me that potential rental income should be included
22 in projected income for a cash flow analysis of the
23 entities being valued in this case.

24 Also, while the business plan mentions
25 that there are apartments, and they were rented

1 when the plan was written in 2010, it does not say
2 that the rents from the apartments will be part of
3 the expected income to investors that would inure
4 to the benefit of investors.

5 Also, Brackett correctly notes that if
6 you include rental income of any sort, you have to
7 offset it with the cost of renting, which includes
8 maintenance, utilities potentially, and various
9 other costs incurred by landlords. Renting is not
10 free. There was no source of information for these
11 costs of renting, so he choose to exclude the
12 potential rental income.

13 Gordon, when he did his own discounted
14 cash flow analysis using the cash flow to the
15 enterprise approach, included rental income for all
16 four apartments at 1350 with no deduction for any
17 expenses of renting it. He did not know if they
18 were rented on the valuation date or any date or
19 what management was actually planning to do with
20 the apartments. He also did not deduct -- and I
21 already said this -- anything from the rental
22 projections to offset the cost of the real estate
23 entities of renting.

24 He said that he delayed including rent
25 as income for about six months, meaning he didn't

1 include rental income from the apartments until the
2 beginning of 2012, and so he thought that would
3 offset any expenses that would be incurred at any
4 point in the future, but he gave no basis in the
5 evidence. There was no basis in the evidence for
6 that kind of an assumption. And he didn't allow
7 any break in time for rental income because of
8 change in tenants or difficulties of any sort,
9 which Brackett testified was common and which I
10 found to be credible.

11 After hearing all the evidence on this
12 issue of the apartments, I find the potential
13 investor on the valuation date would not expect the
14 real estate entities to be generating significant
15 income from renting apartments. The businesses
16 were not created to rent apartments. They were
17 created to operate restaurants, and rental income
18 from the apartments was not used in any of the
19 projections in the business plans.

20 Any potential investor in a small
21 business like this should have investigated the
22 premises before deciding to invest and would have
23 seen the apartments were not generating any income
24 as of May 26th and, therefore, would not have had
25 any expectation of income from those apartments.

1 Since the apartments were not rented at the time of
2 the valuation and were not renovated at the time,
3 there was no promise of an income stream from these
4 apartments, and Gordon included no offset for the
5 expense of renting, I find it more reasonable not
6 to include apartment rental income or expenses as
7 Brackett did than to include four apartments at
8 \$1350 per month with no offsetting expenses.

9 The third criticism or issues that
10 Gordon made of Brackett's income cash flow analysis
11 is titled Intercompany Rent Expense.

12 Gordon also criticized Brackett's cash
13 flow analysis on the basis that his inputs didn't
14 recognize the income generated from intercompany
15 rent, that's I-N-T-E-R, meaning between the four
16 entities. The two restaurant operating entities
17 paid rent to the two real estate entities.
18 Brackett didn't include that rent or the offsetting
19 costs to the real estate companies. He admitted,
20 however, that if he had included those
21 transactions, it would not have been just a wash on
22 a combined entity basis. It would have generated
23 some income for investors. Gordon never stated,
24 however, what impact this error had on Brackett's
25 analysis. While he includes this intercompany rent

1 payment in his own analysis, he uses different cash
2 flow approach, the cash flow to the enterprise
3 method, so it's not possible for me to tell how
4 this failure of Brackett to include the
5 intercompany rent really affected his conclusions.

6 Gordon himself also inflated the income
7 to the real estate entities in his cash flow
8 analysis, but I'll discuss that more later when I'm
9 talking more specifically about his.

10 All right. The final issue I'm going to
11 talk about for Brackett's approach and Gordon's
12 criticisms is Number 4, Company Specific Risk.

13 Gordon then criticized Brackett's
14 application of a company specific risk to
15 Brackett's cost of equity calculation.

16 Brackett testified that this is a
17 subjective factor, but it is key to evaluating the
18 risk of a particular company over the general
19 market risk. It's appropriate to apply it in this
20 case because the existence of the company is in
21 jeopardy, there's substantial likelihood of
22 default, and the debt level is much higher than
23 restaurants of this type. That's what Mr. Brackett
24 said, and I agree with him.

25 Trustee counsel challenged Brackett's

1 chart in which he evaluated the various risks which
2 were set out in Appendix F to Brackett's report in
3 which he went through a list of factors in
4 determining the amount of company specific risk to
5 assign, but I was persuaded that it was appropriate
6 to apply a significant company specific risk to
7 this enterprise and find that Brackett's 6 percent
8 value for this risk was reasonable in the
9 circumstances of this company. In fact, at this
10 point in the lives of these entities, the risk of
11 failure was high and the risk of investors not
12 being repaid at all, let alone in the foreseeable
13 future, in light of all the cost overruns and
14 double the debt justifies this 6 percent addition
15 to the cost of equity rate.

16 Gordon's testimony that there should
17 have been no specific company-specific risk
18 component was not credible. He said the fact that
19 this company had zero track record of sales, had
20 twice the bank debt that had been projected, had
21 many problems getting ready to open, several months
22 late in opening even the first restaurant, and even
23 months later in opening the second, which could
24 only be opened with a significant amount of
25 additional funding, made no difference.

1 He stated that high-risk startups with
2 no track record are incorporated into the other
3 published risk factors. He also stated the fact
4 that Weiner and Mohr had significant restaurant
5 management experience was enough to counteract any
6 company-specific risk. He thought that the fact
7 that this type of a pizza concept that was being
8 tried at Roots had never been done in the Chicago
9 market didn't increase the risk of a brand new
10 restaurant any more than an already established
11 restaurant would face. This was not persuasive.
12 Brackett was correct to include a significant
13 company-specific risk for these companies.

14 Despite these specific criticisms,
15 Gordon did not redo Brackett's analysis to come up
16 with what he thought was a better cash flow to
17 equity approach and then to, you know, apply out
18 the discounted debt payments to get an actual
19 potentially real number for the cash flow to
20 enterprise approach.

21 Now I'm going to my subheading capital
22 B, Gordon's approach -- I'm sorry, Gordon's Cash
23 Flow to Enterprise Approach. So that's the heading
24 of this section. I'm now launching into what
25 Gordon did instead.

1 Instead of redoing Brackett's cash flow
2 to equity model but using projected numbers he
3 thought were more accurate, Gordon did his own cash
4 flow to enterprise analysis using corrections to
5 cash flow. In doing so, he properly added back
6 into the cash flow the depreciation of \$87,000
7 annually for the Roots restaurant that I discussed
8 earlier that Brackett forgot to add back. But he
9 also overestimated cash flow in many significant
10 ways, and now I am going to give a list of five to
11 six, depending how you count it, criticisms of
12 Gordon's approach.

13 Number 1, Apartment Rental Income.

14 As I mentioned earlier, it was not
15 appropriate to include income in the cash flow
16 projection for \$1,350 in rent for four apartments
17 when no rent was being collected at the time and
18 the income projections for the businesses did not
19 include rental income.

20 Gordon also didn't deduct any expenses
21 for renting, and he ignored that management decided
22 to use one of the apartments for an office.

23 The result is an overstating of any
24 potential income from the apartments even if it is
25 reasonable to take into account some portion of

1 apartment rent as income.

2 Gordon used annual rental income up from
3 \$64,000 in 2012 up to 74,000 in 2016, which I think
4 reflected a potential increase in rent every year.
5 These figures are shown in Exhibit 3 to his report
6 and result in significant overstatement of cash
7 flow.

8 2, Intercompany Rental Expense.

9 As I noted earlier, Brackett admitted
10 that there would have been a cash flow to the real
11 estate entities that would add value for the equity
12 holders, the interest holders, if you considered
13 intercompany rents paid from the restaurant
14 entities to their relevant real estate entities.
15 So Gordon included those values in his cash flows,
16 which is fine in principle, except he overstated
17 those amounts by failing to properly adjust for
18 depreciation expense. He, therefore, overestimated
19 the income of -- to the rental -- I'm sorry -- to
20 the real estate entities for intercompany rent by
21 \$120,000 of depreciation expense per year.

22 3 is entitled Management Expense.

23 Gordon also overstated cash flow to the
24 enterprise by failing to take into account
25 management fee payable to both Weiner and Mohr and

1 some other managers that is separate from the
2 salaries for managers included in the budget in the
3 business plan. Weiner testified he never took this
4 as a salary expense, and Gordon failed to take into
5 account that each of the restaurant operating
6 agreements provided -- well, one provided for
7 Weiner and Mohr, Roots, to be paid annual
8 management fees totaling \$120,000, plus the other
9 operating agreement for the bakery provided for
10 \$130,000 to the managers of that enterprise.
11 Gordon said he didn't see these figures in
12 Brackett's projections, which is true, but I was
13 persuaded by Weiner and the provisions in the
14 operating agreement that these fees must be
15 deducted somewhere in this cash flow analysis.
16 Gordon, therefore, estimated -- overestimated cash
17 flow by 250,000 a year for this expense.

18 4, Preferred Shareholder Dividend.

19 Gordon also interpreted the provisions
20 of the operating agreement to require a 10 percent
21 annual dividend to preferred shareholders like
22 Lustig. He incorporated these payments he thought
23 were required annually into his analysis in
24 Exhibit 2.1 for preferred shareholder dividends.
25 This exhibit shows this amount being calculated in

1 each year. The operating agreements do not call
2 for an annual payment of this preferred member
3 dividend. Instead, it's a one-time payment.

4 "Preferred distribution" is a defined
5 term, and it is in the definition section at the
6 beginning of each of the two restaurant operating
7 agreements, which are the -- and the restaurant
8 operating agreements are the only ones -- or the
9 restaurant operating entities are the only ones
10 with preferred members. So these operating
11 agreements provide that a "preferred distribution"
12 quote, means a sum equivalent to 10 percent of the
13 aggregate capital contributions of all the
14 preferred members which shall be payable as set
15 forth herein. Each preferred interest representing
16 a required capital contribution of \$35,000 will be
17 entitled to an aggregate preferred distribution
18 equal to \$3,500, subject to..., a bunch of things
19 that aren't relevant here.

20 This language makes it clear that
21 preferred members are entitled to the distribution
22 only once, not annually. An aggregate capital
23 contribution. I'm sorry. I shouldn't have focused
24 on that. It is an aggregate preferred distribution
25 equal to \$3,500. So, in fact, the language in this

1 definition makes it clear that this was a one-time
2 distribution, not an annual distribution. It says
3 in plain English the preferred distribution to a
4 member investing \$35,000 will be \$3,500, 10 percent
5 of the capital contribution period.

6 Mr. Gordon attempted to justify his
7 including an annual 10 percent payout of preferred
8 dividends by referring to Paragraph 4.8 of these
9 agreements. That provides for distributions of net
10 cash flow, "first, to preferred members in an
11 amount equal to an unpaid amount of the preferred
12 distributions." Here again, however, there is no
13 mention of an annual payment. It simply says
14 preferred distributions get paid before the
15 preferred and common members divide distributions
16 according to a sharing ratio that is defined
17 elsewhere in the agreement. The agreement does not
18 provide for an annual preferred dividend.

19 Gordon included an annual preferred
20 dividend of 10 percent in his discounted cash flow
21 analysis as shown in Exhibit 2.1 of his report.
22 For the first year, he included a dividend of
23 \$158,747. In the following years, he included
24 varying amount between 144,000 and 119,000, all of
25 which should not have been included. His present

1 value of these preferred cash dividends, the great
2 majority of which should not have been included, is
3 \$672,798 as shown in the right-hand column of his
4 Exhibit 2.1 to his report.

5 So Gordon used that 672,798 figure in
6 his summary of his discounted cash flow analysis,
7 which is in Exhibit 2 of his report, the third line
8 down. Instead, he should have used 158,747, the
9 amount expected in the first one-time payment of
10 10 percent. If the calculations in his Exhibit 2
11 are done with the correct figures for preferred
12 dividends, the difference this error caused in this
13 calculation on the value of Lustig's 7 percent
14 share, assuming there is a liquor license, is that
15 it inflates that value by \$42,632.

16 Here I will note there have been no
17 distributions to any members of the bakery entities
18 and only small distributions to Roots members over
19 the past three years beginning in 2014. Although
20 the discounted cash flow is a forward looking
21 exercise from the valuation date and is not based
22 on what actually happened, I cannot help but noting
23 that projections for new enterprises are inherently
24 very speculative, just as Brackett testified. So
25 view that last bit as a footnote.

1 Subheading Number 5. And this is on my
2 analysis/critique of Gordon's discounted cash flow.
3 So subheading 5 is called Weighted Average Cost of
4 Capital or WACC.

5 Since Gordon chose to use net cash flow
6 to the enterprise approach instead of net cash flow
7 to equity as Brackett had done, it is appropriate
8 to use a different discount rate in determining the
9 present value. Instead of using cost of equity
10 like Brackett used, you must use a weighted average
11 cost of capital or WACC, W-A-C-C.

12 Gordon illustrated how he arrived at his
13 WACC in Exhibit 4 of his report. To determine
14 this, he used a weighted average cost of capital
15 for the different components of the capital
16 structure, which includes -- in this case includes
17 preferred equity, common equity and debt. His
18 calculation of this rate is illustrated in
19 Exhibit 4 to his report.

20 He also ultimately applies a pre-tax
21 WACC of 14.7 percent and a post tax or what he
22 labels "tax effected" rate of 13.9 percent. He
23 made an important error in this analysis in
24 determining the cost of preferred equity because he
25 again assumed that a preferred distribution was

1 required annually instead of just on a one-time
2 basis. This means that his weighting for the
3 preferred dividend rate and preferred distribution
4 rates were way off. Instead of being the
5 47 percent and 53 percent weighting percentages
6 that he used, they should have been 15 percent and
7 85 percent. This would have resulted in
8 significantly increasing the 14.6 percent pre-tax
9 rate and 13.9 percent post-tax weight for WACC,
10 W-A-C-C, that he should have used.

11 Brackett credibly testified that the
12 WACC should be somewhere between 15 percent and
13 25 percent depending on various factors. So higher
14 than what Gordon used.

15 Brackett also testified that the
16 preferred distribution error alone would result in
17 a change in the WACC by .6 percent, and that this
18 would reduce the value of the enterprise overall by
19 \$600,000, even using all of Gordon's overstatements
20 of cash flow.

21 Gordon was asked, in effect, if in his
22 50 to 60 business valuations he's done, he has ever
23 used a WACC this low as he used for this case. He
24 claimed not to remember, but this was not credible.
25 If he had answered the question directly, I believe

1 he would have admitted that this was a very low
2 WACC to use. So I find that the WACC used by
3 Gordon was too low to generate a realistic estimate
4 of value based on cash flow to this enterprise, and
5 that the .6 percent error that Brackett
6 demonstrated for just improperly calculating
7 preferred dividend payments does not fully correct
8 this underestimate. I have not been presented any
9 evidence, however, of what a more appropriate WACC
10 would be beyond the .6 correction to his numbers,
11 and, therefore, I could not make a corrected -- and
12 by the way, I could not make a corrected present
13 value calculation on my own in any event.

14 Gordon's calculated value of Lustig's
15 7 percent interest, assuming that the enterprises
16 had a license, so only after the interests were
17 transferred by Lustig, after controlling for tax
18 effects, as both experts agreed a prospective
19 investor would do, was \$240,070. So this was his
20 estimate of the value of Lustig's interests to
21 another investor using what he believed was correct
22 methodology and correct projections of income,
23 expenses and the like.

24 I was unable to recalculate the value
25 using corrected figures for various expense and

1 income categories as I've already said, and I am
2 unable to process it using a higher WACC.

3 So Weiner's counsel did provide a
4 helpful summary in closing argument, however, and
5 it relies on Gordon's too low WACC and adjusts his
6 bottom line for four of the items that I have found
7 were erroneously included or not included by
8 Gordon.

9 As I said I would, I reviewed the
10 testimony of the two experts to make sure that
11 there was actual testimony in the record by experts
12 that supported the simple calculations that were
13 done in that demonstrative exhibit, and I found
14 that it was there, and it did simply reflect
15 testimony that had been given.

16 So Subsection 6 of the analysis of
17 Gordon's cash flow analysis. Subsection 6 is
18 entitled Corrections to Gordon's DCF or Discounted
19 Cash Flow.

20 Both experts agreed that the best value
21 to look at in considering what an investor would
22 pay for an interest is the after-tax value.

23 So I'll use Gordon's after-tax figure.
24 He estimated the after-tax value of Lustig's
25 7 percent interest of \$240,979 or at \$240,979.

1 Adjusting only for four errors, that value is
2 reduced to \$45,186. Those four errors are:

3 1, treating the one-time preferred
4 dividend of 10 percent as an annual payment that
5 overstates the after-tax value of Lustig's
6 interests by \$42,632.

7 2, the depreciation that should not have
8 been added back into the estimated intercompany
9 rent expense, which caused a decrease in the
10 business enterprise value of \$720,000, which
11 results in a \$31,329 reduction in the estimate of
12 the after-tax value of Lustig's interests.

13 3, omission of the \$250,000 in annual
14 management fees. This results in a 1.5 million
15 decrease in the business enterprise value and a
16 \$65,267 decrease in the after-tax value of Lustig's
17 interests.

18 4, omitting payments for 1.3 million in
19 additional debt incurred for a build out that were
20 not included in his analysis. And I failed to
21 write down the actual number attributed to that
22 error.

23 So if just those items are reduced from
24 Gordon's number -- after-tax number, and the WACC
25 is not even corrected, the post-tax value of

1 Lustig's interests is only \$45,186.

2 So I'm unable to quantify how that
3 \$45,000 would decrease if a higher WACC was used,
4 and I also cannot calculate how much the number
5 would decrease if no apartment income was used or a
6 smaller number was used, but I conclude that this
7 number is too high to estimate even the value of
8 the interests in the hands of another investor.

9 The trustee has the burden of providing
10 the value of the property transferred. Based on
11 all the errors I was able to quantify and by the
12 too low WACC rate and inflated apartment rent, I
13 find the trustee failed to establish by a
14 preponderance of the evidence that any significant
15 value was transferred to Weiner.

16 And even if I used the inflated 45,186
17 value, I find that the value Lustig received from
18 the transfer exceeds this amount even before
19 reducing for any potential award -- I'm sorry --
20 reducing any potential award to the trustee by
21 32 percent based on the transfer of the interests
22 initially purchased with the \$125,000 check from
23 Lustig Capital that was ordered to be turned over
24 to Freeborn & Peters by the Circuit Court of Cook
25 County, which I will discuss closer to the end.

1 Subheading C of my opinion, which is
2 dealing with the different approaches to valuation,
3 is entitled Market Approach to Value.

4 Before I get into the details of the
5 analysis of the value provided to Lustig in the
6 transfer though, I will address the third potential
7 way to value the interest in addition to the net
8 asset value approach and the discounted free cash
9 flow approach that I've already discussed.

10 The third potential approach is called
11 the market approach. As both experts testified, in
12 some circumstances, the value of an interest in an
13 organization can be determined by looking at recent
14 market transactions.

15 Brackett concluded there were no actual
16 market transactions at all, and you would need more
17 than one in any event.

18 Gordon testified to the contrary, that
19 essentially any transaction within one to two
20 years, depending on the circumstances, could be
21 used as evidence of value. He said some analyses
22 use up to three years for transactions depending on
23 the stability of expectations in that market.

24 Here, however, I find there is no
25 "stability of expectation" at all. These were

1 entirely new, small and risky enterprises with no
2 basis for any finding of stability of any sort. I
3 reject Mr. Gordon's testimony on this issue as not
4 persuasive.

5 Also, the Glayshers' payment was a
6 payment based on the subscription agreement entered
7 before October 12 of 2010. As I noted earlier,
8 those subscription payments were not intended to
9 reflect the value of the enterprise, and in any
10 event, the company's financial situation and
11 outlook for investors was far different and much
12 worse on May 26, 2011, than it was in October of
13 2010.

14 I also reject the argument by really the
15 witness, Gordon, and trustee's counsel, that the
16 Glayshers, who were making a payment required under
17 a contract entered many months before, should be
18 expected to simply breach that agreement and refuse
19 to pay if they thought the investment was worth
20 less than what they had originally agreed to pay
21 for it. They had a contractual obligation to pay
22 and could have been sued for the money with no
23 obvious defense. The fact they chose not to face
24 that consequence doesn't reflect anything
25 significant about the value of Lustig's membership

1 interests on May 26, 2011.

2 Okay. Subparagraph 5, which follows
3 Subparagraph 3 which was on the net asset value
4 approach, Subparagraph 4 on discounted cash flow
5 approach, and now I'm calling this Number 5. And
6 whether I've numbered these correctly or not, I'm
7 not a hundred percent sure. But this section is
8 entitled Value Received By Lustig in the Transfer.

9 Just so you know, I'm only on Page 33,
10 but the end is at Page 43.

11 Okay. So Value Received by Lustig in
12 the transfer.

13 Even assuming that somehow Lustig's
14 creditors were entitled to the value of the shares
15 after he transferred them, and not before he
16 transferred them, so not as though he'd actually
17 kept them, and even if I give any weight to the
18 inflated \$45,000 value produced by making some
19 necessary adjustments to Mr. Gordon's discounted
20 cash flow, the value that Lustig received from the
21 transfer easily exceeds this amount. I also
22 specifically find, not necessarily in a great
23 place, but that each of these promises provided a
24 real value to Lustig at the time of the transfer
25 and when they were made, and that each was very

1 likely to be carried out by Weiner.

2 A. Avoidance of Potential Lawsuits by
3 Weiner and Others Involved in the Enterprises.

4 As I found earlier, if Lustig had not
5 transferred the interests, both enterprises would
6 have failed in short order. The sole cause of this
7 failure would have been Lustig's lying about his
8 convictions.

9 Weiner threatened to sue Lustig for his
10 losses that would have been caused by Lustig's
11 lies. Weiner had potential claims for fraud as his
12 counsel stated during trial. Lustig was fully
13 informed on a number of occasions that he could not
14 be an investor if he had a felony conviction, yet
15 he lied about those convictions on a number of
16 occasions, and he lied on the form required by the
17 City of Chicago.

18 In addition, while the subscription
19 agreements did expressly ask subscribers to verify
20 that they had no felony convictions, Paragraph 5(j)
21 in the representations and warranties section
22 required the purchaser to state he had no knowledge
23 of any suit -- action, suit, government
24 investigation or legal or administrative proceeding
25 that is pending or threatened against the purchaser

1 in any court which could have a very material
2 adverse effect on the purchaser and his ability to
3 comply with the agreements.

4 Here, Lustig knew that he had criminal
5 convictions, including a recent felony conviction
6 that required him to pay at least \$3,200 as
7 disclosed in his schedules which reflect a debt
8 owed to the Department of Justice in connection
9 with his conviction. If that amount was still owed
10 on the date he filed his bankruptcy petition in
11 2015, it is fair to assume that the criminal matter
12 was still open and ongoing. Lustig clearly knew it
13 would disqualify him from being an investor in this
14 business.

15 It's also highly likely he violated
16 other provisions of the agreement which required
17 him, among other things, to certify that he had at
18 least \$100,000 in liquid assets, and that his net
19 worth, excluding his home, furnishings and
20 automobiles, was at least four times the amount
21 invested. So in this case, that would be four
22 times \$370,000 or 1.4 million. So he had certified
23 that he had a net worth, excluding home and autos
24 and furnishings, of 1.4 million when he signed the
25 subscription agreement. In addition, the duty of

1 good faith is implied in every contract, and Lustig
2 clearly breached that duty.

3 So Weiner and Mohr and the entities
4 themselves, and even maybe their other investors,
5 had serious claims that could have been asserted
6 against Weiner if he refused to turn over the
7 interests. Each investor would have lost their
8 entire investment, and the guarantors like Weiner
9 and all the other guarantors would have been liable
10 on the guarantees. The elimination of these
11 potential claims alone would be enough to provide a
12 reasonably equivalent value for the transfer of
13 less than \$45,000 in value.

14 And if Lustig had kept the interests and
15 refused to transfer them and caused the collapse of
16 the enterprises, Lustig himself would have been
17 personally liable on the guarantee of the debt. As
18 I found earlier, the deficiency after all assets
19 were liquidated would have been at least \$790,000,
20 and this was a low estimate. Lustig would have
21 faced this direct liability to which he has no
22 defense as a direct result of his refusal to
23 transfer the shares. The avoidance of this
24 guarantee liability alone is sufficient to provide
25 reasonably equivalent value to Lustig, and in

1 conjunction with Weiner's promise not to sue and
2 eliminating the grounds for others to sue him by
3 giving up the interests so liquor licenses could be
4 obtained, he eliminated the principal grounds for
5 any potential suit against him.

6 Subparagraph B of the value to Lustig is
7 Promise to Try to Get Lustig Out of Loan
8 Guarantees.

9 Weiner also promised to try to get
10 Lustig off the guarantees of the loans. While the
11 trustee's counsel argues that Weiner couldn't
12 ensure that they would remove him from the
13 guarantees and suggests that this promise had no
14 value to Lustig, his promise -- Weiner's promise to
15 attempt to accomplish it did have value.

16 Otherwise, it's very unlikely the bank would have
17 been willing to release Lustig from the obligation.

18 Weiner had an incentive to get Lustig
19 removed because he wouldn't want to take the risk
20 the City of Chicago might still consider him as a
21 lender to the entities on the basis of the
22 guarantee, and Weiner did deliver on that promise
23 and was able to get Lustig released from the
24 guarantee on the loans from Gold Coast Bank.

25 The trustee contended this release only

1 happened because of a refinance, but that's not
2 necessarily true. Weiner took advantage of the
3 refinance to have Lustig's guarantee eliminated.
4 Weiner attempted to accomplish this for Lustig, and
5 he did accomplish it.

6 Trustee's counsel similarly argues that
7 the actual value from getting the guarantee
8 released shouldn't count here because technically
9 the release was granted by the bank and not Weiner
10 himself, but this is not the proper analysis.

11 As I noted a long time ago at the
12 beginning of my opinion, in considering the
13 exchange of value, the focus is on the value given
14 up by the debtor and the value received by the
15 debtor and not on the exact source of it, and
16 indirect benefits count. I find that real value
17 flowed to Lustig from this promise to -- from
18 Weiner's promise to try to get Lustig out of the
19 guarantees, and that Weiner performed on those
20 promises by getting Lustig out of the Gold Coast
21 guarantee. Lustig and his creditors got a benefit
22 from the elimination of this obligation.

23 Subsection C of the benefit to Lustig is
24 entitled Investor Discount.

25 Weiner also promised that Lustig and

1 four family members could keep a 40 percent
2 investor discount that would apply at Roots, the
3 bakery and Weiner's other restaurant 50/50. The
4 trustee downplays the significance of this promise,
5 but Lustig and his family used this discount in
6 excess of \$60,000, much of which could be
7 attributed to Grant Lustig's spending on himself
8 and friends. It's very likely that Grant Lustig
9 himself got a benefit in excess of \$20,000 from
10 these discounts. Lustig admitted that he ate often
11 at the two restaurants, and he was known as a big
12 spender at 50/50 where he was also given the
13 discount. He only stopped using them in 2014 when
14 Lustig created a hostile environment for one of the
15 managers at Roots, so they would no longer permit
16 him in that restaurant. They still permitted him
17 to take out -- the discount on take-out food,
18 however.

19 This promise to provide the investor
20 discount even though he was no longer an investor
21 was fully within Weiner's power to perform, and it
22 provided real value to Lustig and adds to the value
23 he received in excess of the value of his interests
24 even looking at the value after Lustig transferred
25 them, not if Lustig had kept them.

1 The trustee also argues that Weiner did
2 not personally provide the discounts, meaning it's
3 the corporate entities who actually got less money
4 by providing the discounts. But as I noted
5 earlier, this does not matter. The focus is on
6 what Lustig received, and there is no doubt that he
7 only kept the investor discount because Weiner
8 agreed that he could, and as the manager of those
9 restaurants, he ensured they all gave him the
10 discount even though he was no longer an investor.

11 Subsection D, Promise to Return Shares
12 if the Convictions were a "Mistake."

13 Weiner also orally agreed to return the
14 interests to Lustig if Lustig was telling the truth
15 and the City was mistaken.

16 As I noted earlier, there was no chance
17 that that would ever happen. But it demonstrates
18 Weiner's good faith and supports his testimony that
19 he did not give any real value to these interests
20 when they were transferred. I also specifically
21 find there was no evidence there were any side
22 agreements between Weiner and Lustig whereby Weiner
23 held the shares and Lustig could continue to have
24 some sort of beneficial interest.

25 Weiner had no desire to take the shares

1 personally, and he only entered into the
2 transaction because Lustig's lies required him to
3 deal with the issue immediately. So it turns out
4 this promise to return the shares, while made in
5 good faith by Weiner, had no value to Lustig
6 because Lustig knew his perjury conviction would
7 never be expunged, and combined with his lying on
8 the City form would prevent him from ever owning an
9 interest in any of these entities in the future.
10 So this promise, in fact, provided no value to
11 Lustig.

12 Paragraph E on the benefits to Lustig is
13 Statute of Fraud Defense.

14 The trustee argued in closing argument
15 that Weiner and Lustig did not write down any of
16 these oral agreements, so he contends they are
17 unenforceable under the statute of frauds.

18 This is not correct. Under Illinois
19 law, the statute of frauds is not a defense against
20 a party who has already fully performed a contract.
21 There are many cases that so hold, but I'll cite
22 just a few. *Barber v. Golden Seed Company*, a
23 Seventh Circuit case, 129 F.3d 382, 388-89;
24 *Noesges, N-O-E-S-G-E-S, v. Servicemaster Company*,
25 598 N.E.2d 437 at 441. "It is well settled,

1 however, that complete performance on the part of
2 one of the parties to the oral agreement bars
3 application of the statute" with many, many
4 citations omitted. Also, *Time Warner Sports*
5 *Merchandising v. Chicagoland Processing*, 974
6 F.Supp. 1176 (Northern District of Illinois 1997).
7 In this case, Lustig fully performed his
8 obligations under the oral agreement when he
9 transferred the shares on May 26, 2011, and then
10 when he executed whatever else was required on
11 June 7th. Weiner, therefore, would not be able to
12 avoid performance by relying on the statute of
13 frauds. The oral agreements were therefore
14 enforceable promises that provided value to Lustig
15 that more than offset the value of the interests on
16 May 26, 2011.

17 Subsection F I'm calling Other Findings
18 for lack of a better heading.

19 As I noted earlier, the typical test for
20 reasonably equivalent value has four elements that
21 look at the value of what was given, the value of
22 what was received, whether the transaction was an
23 arm's length, and the good faith of the transferee.

24 I find that Weiner acted in good faith
25 at all times with respect to this transaction.

1 Neither side gave me a definition of an
2 arm's length transaction, but Black's Law
3 Dictionary defines it as: "Dealings between two
4 parties who are not related or on close terms and
5 who are presumed to have roughly equally bargaining
6 power and not involving any confidential
7 relationship." The transaction between these two
8 parties meets the test. You have two parties not
9 related, not on close terms, had roughly equal
10 bargaining power and are not involved in any
11 confidential relationship. So all the requirements
12 for a finding of reasonably equivalent value have
13 been met by Weiner.

14 Subparagraph 6. And this is on to an
15 entirely new topic really. Offset for Transfer to
16 Satisfy Debt of Freeborn & Peters and The
17 Rooker-Feldman Doctrine.

18 I'm on Page 36.

19 Another issue in this case is the impact
20 of the turnover order entered by the Circuit Court
21 of Cook County. As I discussed earlier, this order
22 required Weiner to turn over Lustig Capital's
23 \$120,000 investment in the Chicago Division Street
24 Restaurants entity to satisfy the debt of Lustig
25 Capital to Freeborn & Peters. As I noted also,

1 Grant Lustig was jointly and severally liable on
2 that debt, and Freeborn & Peters may have had their
3 own bankruptcy planning reasons for drafting the
4 order the way -- the order that the judge signed
5 that way. Whatever their motivation, Weiner was
6 ordered to transfer \$120,000 worth of the \$370,000
7 of interests that everybody agrees was owned by
8 Grant Lustig, not Lustig Capital, to satisfy debt
9 that was, in fact, owed by both Grant Lustig and
10 Lustig Capital.

11 Although the motion for turnover does
12 not mention fraudulent transfer, and the action was
13 ostensibly merely a collection action through a
14 citation to discover assets proceeding after entry
15 of a judgment, there is no possible way Scott
16 Weiner could be holding assets of Grant Lustig or
17 Lustig Capital unless the transfer from Grant
18 Lustig to Lustig Capital was considered a
19 fraudulent transfer.

20 So Weiner decided not to oppose the
21 motion or the order, and Freeborn was not forced to
22 defend their undefensible contentions that Lustig
23 Capital had the ownership interest or that Weiner
24 had to turn over the interests. In the end,
25 however, a valid court order was entered requiring

1 Weiner to turn over the interests purchased with
2 the \$120,000 check that had been issued by Lustig
3 Capital, and Weiner once again concluded the value
4 of those interests wasn't worth the value of the
5 attorneys' fees to fight it.

6 After the completion of the transfer to
7 Freeborn in compliance with that court order,
8 Freeborn obviously decided that it didn't want the
9 restaurant interests either, and that they were not
10 worth the \$120,000 to them, so they negotiated to
11 give up the right to collect on the remainder of
12 that judgment and all rights of any kind and to
13 give back the interests to Mr. Weiner for the
14 one-time payment of \$40,000 in cash.

15 Weiner's counsel in this case filed an
16 extremely late motion to dismiss a week before
17 trial raising this issue and contending that this
18 court lacks jurisdiction over an adversary
19 proceeding because it would involve this court
20 sitting in review of the state court order.

21 As I stated a number of times orally in
22 this case, but I haven't formally ruled yet, and
23 this will constitute the ruling, I reject this
24 argument. I'm not going to take the time to cite a
25 lot of cases here, but the Rooker-Feldman Doctrine

1 essentially bars the losing party in a state court
2 proceeding from then going to federal court to try
3 to get a more favorable result. See, e.g., *Lance*
4 *v. Dennis*, 546 U.S. 459, 464 (2006); *Exxon Mobil v.*
5 *Saudi Basic Industries Corp*, 544 U.S. 280 at 284, a
6 2005 U.S. Supreme Court case.

7 The parties to that proceeding in state
8 court who matter here are Lustig, Lustig Capital,
9 Freeborn and Weiner. The trustee was not a party,
10 and he does not stand in the shoes of Lustig for
11 purposes of the claims in this case before me
12 today. Instead, he stands in the shoes of Lustig's
13 creditors under 11 U.S.C. Section 544 invoking the
14 rights of creditors under the Illinois fraudulent
15 transfer statutes. So the trustee is not a losing
16 party who has now come to federal court for a
17 better result. Rooker-Feldman, therefore, does not
18 bar me from asserting jurisdiction over this claim.

19 This does not mean, however, that I can
20 or should ignore that state court order. Instead,
21 it must be considered in determining what, if
22 anything, Weiner should be required to transfer to
23 the trustee, what is the appropriate remedy.

24 In other words, I should and will give
25 effect to that order. But I interpret that order

1 to require Weiner to pay \$120,000 or 32 percent of
2 Weiner's total interests that he got from Lustig to
3 a creditor of Lustig to pay a debt owed by Lustig,
4 and, therefore, for the benefit of Lustig and
5 ultimately his bankruptcy estate which has fewer
6 creditors as a result. Lustig was jointly and
7 severally liable for that debt with Lustig Capital.
8 So while the order specifically talks about the
9 payment being applied to Lustig Capital's debt,
10 that makes no difference. That payment, that order
11 and that payment necessarily reduced Grant Lustig's
12 personal liability for that debt on a
13 dollar-for-dollar basis. That transfer by Weiner
14 of the \$120,000, whatever amount of shares that was
15 or interests that was, therefore also did pay
16 Lustig's debt to Freeborn & Peters, as well as
17 Lustig Capital's joint debt with the debtor to
18 Freeborn & Peters.

19 And as I mentioned, that turnover motion
20 functioned like a fraudulent transfer action with
21 the result being that a party to whom a debtor
22 transferred interests was required to turn over
23 some of those interests to pay a creditor of the
24 debtor. So Weiner has already been required by a
25 valid state court order to turn over what I

1 hopefully calculated correctly is 32 percent of
2 Lustig's former interests to satisfy a debt owed by
3 the debtor to a creditor.

4 Section 550 of the Bankruptcy Code
5 contains a number of provisions that probably
6 mandate that this be the result. That's at 11
7 U.S.C. Section 550. Section 550 applies to, among
8 other claims, a trustee's attempt to bring assets
9 into the bankruptcy estate under 11 U.S.C.
10 Section 544, which, as I mentioned at the
11 beginning, is the section under which the trustee
12 is proceeding in this case.

13 Section 550(a) provides that to the
14 extent a transfer is avoided under Section 544, the
15 trustee may recover for the benefit of the estate
16 the property transferred or, if the court so
17 orders, the value of that property from the initial
18 transferee or any immediate or immediate transferee
19 of such initial transferee.

20 Section 550(b) then places limits on
21 when a trustee can recover from a subsequent
22 transferee. Weiner has not specifically argued
23 that the defenses in 550(b) be applied to him,
24 although he raised this issue generally in his
25 answer and generally in that motion to dismiss and

1 for summary judgment.

2 But putting that aside, Section 550(d)
3 then provides that the trustee is entitled only to
4 a single satisfaction of his claim. Section 550(e)
5 places other limits on what a trustee can recover
6 from a good faith transferee. Each of these
7 provisions is intended to prevent a trustee from
8 making a transferee pay more than once for the same
9 transferred assets. 550(d) was designed to restore
10 the estate to the financial condition that would
11 have existed had the transfer never occurred.
12 That's extremely consistent, I might add, with my
13 previous ruling on reasonably equivalent value
14 here. All the creditors get and all the trustee
15 gets is what the debtor would have if he hadn't
16 made the transfer.

17 Then -- that is, by the way, that the
18 550(d) is designed to restore the estate to the
19 financial condition that would have existed had the
20 transfer never occurred is from *In re Sawran*,
21 S-A-W-R-A-N, 359 B.R. 348 at 354, and that's
22 Bankruptcy Southern District of Florida.

23 And by the way, as a footnote, I have
24 about eight people in the courtroom, and you all
25 may leave any time you want as this drags on longer

1 than anybody could have ever thought, so free feel
2 to go. I'm not going to be bothered.

3 Section 550(d) is invoked to prevent a
4 trustee from recovering twice from a single
5 transferee under 550(a). And there's a whole bunch
6 of cases that cite this, and I'll just cite one or
7 two. *Bakst v. Wetzel* in the *In re Kingsley* case
8 where perhaps the best cite is 2007 WL 1491188,
9 Bankruptcy Southern District of Florida, May 2007,
10 which was confirmed by the Seventh Circuit, quoting
11 *Dobin v. Presidential Financial Corp of Delaware*
12 *Valley* in the *In re Cybridge Corp.* case, 312 B.R.
13 262 at 271, District of New Jersey, and on and on.

14 Here, the trustee himself has not
15 required from Mr. Weiner -- recovered, I'm sorry,
16 from Mr. Weiner before, but a creditor of the
17 debtor has recovered from Mr. Weiner before,
18 providing the benefit of those assets to satisfy
19 one of the debts owed by the debtor, thereby
20 reducing the amount of claims against the debtor.
21 Even if Section 550(d) does not technically apply
22 here, I have the discretion to fashion a fair
23 remedy under both federal and state law. Courts
24 have the power to prevent a party from paying more
25 than once for the same wrong in many contexts. I

1 have a few cites, and I'll eliminate a few.
2 *Portuguese-Sanatna v. Rekomdiv International*, 657
3 F.3d 56, 63 to, I think, 65 (1st Circuit 2011); and
4 *Vesey v United States*, 626 F.2d 627 at 633 (9th
5 Circuit 1980).

6 And Illinois law allows me to exercise
7 discretion and equity in determining the
8 appropriate amount of damages for any fraudulent
9 transfer, as trustee's counsel has conceded. I
10 have discretion under 740 ILCS 160/8(a) to fashion
11 an equitable remedy for any fraudulent transfer.

12 The turnover motion in state court was
13 the functional equivalent of a fraudulent transfer
14 action, and it would be highly inequitable to
15 require Weiner to turn over the value of the same
16 interests twice to a trustee acting on behalf of
17 Lustig's creditors. I find that to permit the
18 trustee to take any value from Weiner for the
19 32 percent of the interests already paid over to
20 Freeborn would be an inappropriate double recovery
21 against Mr. Weiner, and it would be inequitable.

22 So that's my conclusion, but,
23 unfortunately, just on the constructive fraud.

24 So under my first analysis above, there
25 is no potential fraudulent transfer because the

1 interests had no value with Lustig as an owner and,
2 therefore, no value to his creditors, so they lost
3 nothing when he transferred it.

4 Because the parties spent so much time
5 on the expert opinions and in looking at it in a
6 different way, I did my second analysis showing
7 that even if I value the shares before Lustig
8 transferred them as though someone else other than
9 Lustig actually owned them, the value of those
10 shares was still small, and he received more than
11 the transfer -- more from the transfer than
12 whatever that small value is.

13 Here, I conclude that if I found that
14 Weiner -- that there had been a significant value
15 transferred that exceeded the value of what Lustig
16 received, I would still reduce any damages by
17 32 percent taking into account that Weiner was
18 already -- had already been compelled to transfer
19 32 percent of the shares to satisfy one of Lustig's
20 creditors.

21 For all these reasons, I find the
22 trustee has not sustained its burdens under Count I
23 of the complaint of proving that the transfer of
24 interests from Lustig to Weiner was constructively
25 fraudulent under 740 ILCS 160/5(a)(2). I'll

1 therefore enter judgement for the defendant Mr.
2 Weiner on Count I for the constructive fraud count.

3 Much shorter will be my analysis of
4 actually fraud, but it's still another three or
5 four pages just so you know, although it's not
6 exactly single spaced.

7 Section Roman Numeral V is called Count
8 II, Actually Fraudulent Transfer.

9 The trustee alleges in Count II that the
10 transfer by Lustig to Weiner was actually
11 fraudulent. I've discussed the standards for a
12 claim for actually fraudulent transfers and the
13 various badges of fraud in the beginning of my
14 opinion, but the crux of such a claim is that the
15 trustee -- the transferee must have made -- I'm
16 sorry -- the transferor, which would be Mr. Lustig,
17 must have made the transfer with the actual intent
18 to defraud his creditors. I find the trustee has
19 failed to sustain his burden of proof that the
20 transfer was actually fraudulent.

21 Subheading 1, Badges of Fraud Applied in
22 this Case.

23 I'm relying on all my previous findings
24 of fact in reaching this conclusions, but I'll
25 quickly go through the badges of fraud and explain

1 if they exist.

2 The first is that the transfer was to an
3 insider. Insider is defined in a definition
4 section of the Illinois Uniform Transfer Act -- I
5 think it's Fraudulent Transfer Act, I should say,
6 as follows:

7 (g), Insider includes:

8 1, if the debtor is an individual.

9 Which we have here.

10 A, a relative of the debtor or a general
11 partner of the debtor. No.

12 B, a partnership in which the debtor is
13 a general partner. No.

14 C, a general partner in a partnership
15 described in clause B. No.

16 D, a corporation in which the debtor is
17 a director, officer or person in control. No.

18 Under this definition, Weiner is not an
19 insider of Lustig, so this badge is not present.

20 The second badge is that the debtor
21 retained possession or control of the property
22 after the transfer. This factor is not present.
23 Lustig did not retain control of the interests in
24 any way, and Weiner's promise to return the
25 interests if it had all been a mistake in this case

1 was meaningless because there was no mistake, which
2 Lustig knew. Lustig never asserted and never had a
3 right to assert, in the future, control over these
4 interests.

5 The third badge is that the transfer or
6 obligation was disclosed or concealed. I find this
7 element is neutral. These were small privately
8 owned LLCs where there would be no expectation of
9 any public disclosure of any transfer in any event,
10 so this badge doesn't cut either way here.

11 Fourth, the fourth badge is the debtor
12 has been sued or threatened with suit before the
13 transfer. This badge is present. By May, the
14 investors in Workforce, including Wally Posner and
15 William Shepard, had figured out enough about
16 Lustig's misappropriation of their assets that they
17 were threatening legal action by May 26, 2011. In
18 fact, I believe they filed suit by August 2011
19 against him.

20 The fifth badge is that the transfer was
21 of substantially all of the debtor's assets. This
22 is true, so this badge exists.

23 The sixth badge is that the debtor
24 absconded. That is not present.

25 The seventh badge is that the debtor

1 removed or concealed assets, and this factor, like
2 the third one, isn't strongly in favor of fraud
3 either. It's a private investment, and nothing
4 here is indicative of fraud on that issue.

5 The eighth badge is that the debtor
6 didn't get reasonably equivalent value. For all
7 the reasons I discussed earlier in the context of
8 constructive fraud, I find the creditors have not
9 been defrauded -- deprived of reasonably equivalent
10 value.

11 The ninth badge is that the debtor was
12 insolvent or became insolvent shortly after the
13 transfer was made. This badge is present.

14 The tenth badge is that the transfer
15 occurred shortly before or after a substantial debt
16 was incurred. This badge is not really here.

17 The eleventh badge is that the debtor
18 transferred the essential assets of the business to
19 a lienor who transferred them to an insider of the
20 debtor. That badge is not present here.

21 Subsection 2 is entitled No Actual Fraud
22 Here.

23 In determining if actual fraud occurred,
24 the court doesn't simply add up the positive badges
25 and the negative badges, but uses them as a tool

1 for evaluating whether the evidence supports a
2 finding of actual fraud, that the debtor intended
3 to actually defraud the creditors by this transfer.

4 Here I find that Lustig did not actually
5 have a fraudulent intent in making this transfer.
6 Instead, he evaluated the facts, probably not that
7 differently than I did here, and realized these
8 interests had no value to him, his lies would be
9 the cause of the loss of a lot of people's
10 investments and their incurring a lot of
11 liabilities for the loans, that he would be sued by
12 all of them for all of their losses if he didn't
13 transfer, and he would have liability on the
14 guarantee after the businesses failed.

15 If he kept the interests -- I mean, if
16 he gave them away, he would be able to keep the
17 investor discounts so he could still pretend to be
18 a high roller. So he probably figured he would
19 gain more by the transfer than he would lose. He
20 knew the effect that his lies would have on the
21 entire enterprise and all involved in it, and he
22 probably knew that the collapse of these businesses
23 would probably make a lot of people with whom he
24 associated aware of his criminal convictions and
25 his betrayal of these people.

1 Lustig also could probably tell that
2 Weiner was not going to pay him one cent for the
3 interests in light of the precariousness of the
4 financial situation of the entities even without
5 being denied a liquor license.

6 Based on all these facts and
7 circumstances that I've already described in this
8 very long opinion, I find Grant Lustig did not make
9 this transfer in an effort to defeat his creditors
10 but because he didn't see any other viable way out
11 of the situation.

12 I note that the trustee argues that
13 Lustig was obligated to try to extract some sort of
14 cash payment or note in exchange for the interests.
15 He argues it was Weiner and all the other managers
16 and investors who were in a desperate position
17 because of Lustig's lies, so the trustee contends
18 Lustig was in the catbird seat and should have
19 refused to transfer to extract more out of Weiner
20 that could have inured to the benefit of Lustig's
21 creditors. The trustee cites no authority for this
22 proposition, and I will reject it. I'll readily
23 admit extortion is too strong a word for this
24 situation, but something a few steps short of that
25 would probably be accurate, and I do not believe

1 that that was required under the law in this
2 situation.

3 Also, I note that I made an offhand
4 comment at trial that Lustig might actually have
5 done the right thing for once in his life in
6 turning over the shares. I want to make clear that
7 I don't believe Lustig made the transfers because
8 he thought it was the morally right thing to do.
9 Instead, I find he thought it was to his overall
10 benefit to get out of the investment and avoid all
11 the lawsuits and liabilities that would come from
12 refusing to turn over.

13 So for all these reasons, I conclude
14 that the trustee failed to prove an actually
15 fraudulent transfer. I will, therefore, enter a
16 judgment order finding for the defendant Mr. Weiner
17 on all three counts.

18 So I have finally come to the end. I'm
19 very sorry for that extremely long rendition.

20 I am going to just enter a minute order
21 denying whatever the motion that Mr. Weiner's
22 counsel filed before trial, summary judgment,
23 motion to dismiss, whatever it was, and I think
24 that's it.

25 So my apologies, again, for the length.

1 MR. BLOCK: Thank you, Judge.

2 MR. HARPER: Thank you.

3 THE CLERK: All rise.

4 Court is adjourned.

5 (Which were all the proceedings had

6 in the above-entitled cause,

7 August 4, 2016, 1:30 p.m.)

8 I, MARY C. KELLY, CSR, DO HEREBY CERTIFY THAT THE
9 FOREGOING IS A TRUE AND ACCURATE TRANSCRIPT OF
10 PROCEEDINGS HAD IN THE ABOVE-ENTITLED CAUSE.(f)
